

# Cute Carrot tutorial

Important concepts covered: add edge loop, duplicate object, extrude faces

First start by entering editing mode in the default cube (TAB). Change to face selection mode and select the top face:

Move it along the Z axis (G+Z) by 2 and then scale it up (S) by 1.4:

Now, extrude this face (E) by 0.5:

Next, scale it down (S) by 0.7:

Then inset this face (press "I") by 0.5:

Then move it along the Z axis (G+Z) by -0.2:

Now select the bottom face of the carrot and scale it down (S) by 0.7:

Now create 2 edge loops by pressing CTRL + R and then scrolling the mouse wheel up and then double clicking again to confirm:

Now with **both** loops selected, bevel them (press CTRL + B) by 0.15 and 2 segments (use the mouse wheel to increase/decrease the amount of segments):

Now select **both** middle edge loops (you can select edge loops by holding ALT and clicking with the left mouse button on one of the edges, then holding SHIFT and clicking on the other loop with ALT pressed again):

Now scale it in all directions except the Z by pressing "S" and then SHIFT + Z to ignore the Z axis and type 0.8:

Now add a Subdivision Surface modifier and set levels viewport to 4 and Render to 4 as well:

Now go back to object mode, right click the viewport and select “Shade Smooth”:

Next, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add another cube object to the scene (SHIFT+A → MESH → Cube) and move it along the Z axis (G+Z) by 2.7:

Next, enter edit mode and move the whole cube along the Z axis (G+Z) by 1 and then scale it in all directions except Z (S+[SHIFT+Z]) by 0.4:

Add a loop cut (CTRL+R), left click once and type -0.7 in order to move it up:

With this selection, scale up (S) by 1.2:

Next, add again a Subdivision Surface modifier and set again both Levels Viewport and Render to 4:

Go back to object mode, right click the viewport and select “Shade Smooth” again as we did before. Next, rotate it along the X axis (R+X) by 25°:

Now, duplicate it and confirm (so it is duplicated in place) - SHIFT+D. Next, rotate along the Z axis (R+Z) by 120:

Repeat the process again to create the third one:

There you go! You have finished your Cute Carrot!
