

Isometric Bedroom 1

Important concepts covered: array modifier, mirror modifier, bevel modifier, duplicate

Let's start by entering edit mode on the default cube. Scale it down along Z axis (S+Z) by 0.2:

Now scale in all directions except Z by pressing "S" and then SHIFT + Z to ignore Z axis and type 3:

Now add a Bevel modifier and set the Amount to 0.05 and Segments to 3:

Now go to object mode, right click and select “Shade Smooth”:

Now duplicate the plane by pressing SHIFT + D and then Enter. Then enter edit mode on the duplicated plane:

Then, scale it along the Y axis (S+Y) by 0.1 and then go back to object mode:

With the object selected, move it along the Y axis (G+Y) by -2.7 and along the Z axis (G+Z) by 0.1. Finally, scale it down along the X axis (S+X) by 0.98:

Now add an Array modifier and set: Factor X to 0, Factor Y to 1 and Count to 10:

This will be our floor. Now let's do the walls. Create a new cube on the scene - make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it), enter edit mode and scale it up (S) by 3:

Now move it along the Z axis (G+Z) by 3:

Now change to face selection mode and select the top and the bottom faces.
Then, press NUMPAD 1 to go to the front view and select the face of the front:

Finally, press NUMPAD 3 and select also the face on the screen:

Now you should have 4 faces selected:

Delete (DEL or X) the selected faces, so it is “open” and only **2 faces** are left:

Now add a Solidify modifier to it and change the thickness to be -0.5 and check “Even Thickness”:

Now go back to object mode and apply the modifier:

Enter edit mode again and add a loop cut (CTRL + R and then double click to confirm) in the middle of the wall:

Now let's bevel it (CTRL + B) by 2:

Now change to face selection mode and select the up and bottom face loops (you can do this by holding ALT and clicking in one of the faces of the loop. For the next loops to be selected, you can hold SHIFT + ALT and just click on the new loop to also select the new loop):

Now press ALT + E and select “Extrude Faces Along Normals” and type 0.4:

Now add a Bevel modifier again to round the edges of the mesh and set Amount to 0.05 and Segments to 3:

Now select the face parallel to the X axis, duplicate it (SHIFT+D) and scale it down (S) by 0.3:

Then extrude (E) it by 0.2:

Now inset it by pressing "I" by 0.15:

Then extrude it (E) again by -0.15:

Now, select this mesh by pointing with the mouse on top of it and pressing “L” to select linked:

Move it along the X axis (G+X) by -1. Then, duplicate it by pressing SHIFT + D and move it along the X axis (G+X) by 2:

Now let's start modeling the bed. First, go back to object mode, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add a new Cube object to the scene. Then, enter edit mode and move the cube along the Z axis (G+Z) by 1:

Next, scale it along the Z axis (S+Z) by 0.2 and along the Y axis (S+Y) by 2:

Go to the top view by pressing NUMPAD 7 and add an horizontal loop cut (CTRL+R):

Add another one but vertical (CTRL+R):

Now change to wireframe mode by clicking on the following icon located on the top right corner of the screen:

Change to face selection mode and make the following selection, also making sure that also the side faces are selected. You can click and drag to make the selection. If you hold SHIFT while clicking and dragging, it will add the selection to the previous one:

1 - Click and drag the left side:

2 - Hold SHIFT and click and drag the bottom part:

With this selection, delete the faces (DEL or X) so you are left only with the following part:

Now go back to Solid shading view:

Now add a Mirror modifier and check also Y axis:

Next, add also a Bevel modifier and set the amount to 0.05 and number of segments to 3 again:

Select the top side face of the bed:

Duplicate it (SHIFT+D) and move it along the Z axis (G+Z) by 0.4:

Then, extrude (E) it by -0.3:

Now add 2 edge loops (CTRL+R, 2) in this created mesh:

Change to Face selection mode and select the following faces and move it along the Z axis (G+Z) by 0.15:

Now select only the inner one and move it along the Z axis (G+Z) by 0.09:

Now, select all the top faces of this mesh, duplicate it (SHIFT+D) and extrude in the Z axis (E+Z) by 0.2:

Next, add another cube (SHIFT+A → MESH → Cube) and move it along the Z axis (G+Z) by 1:

Then, move along the X axis (G+X) by 1 and along the Y axis (G+Y) by 1.8:

Next, scale in all axis except Z (S+[SHIFT+Z]) by 0.17:

Then, move it along the Y axis (G+Y) 0.05:

Now, add another 2 loops (CTRL+R, 2), change to face selection mode, select the outer middle one and move it along the X axis (G+X) by -0.1:

Now go to object mode and apply the mirror modifier:

Enter edit mode again and deselect all by double pressing “A”. Then, select one of the faces on the center of the bed, point the mouse to it and press “L” to select the center part of the bed:

Then, duplicate it (SHIFT+D) and move it along the Z axis (G+Z) by 0.25:

Scale it down by 0.9 in all directions (S) and then again but only along the Y axis (S+Y) by 0.9:

To finalize the bed, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add another cube (SHIFT+A → MESH → Cube), move it along the Z axis by 1 (G+Z), then scale it down (S) by 0.6:

Move it along the Y axis (G+Y) by 1.3 and then scale it along the Y axis (S+Y) by 0.5:

Now select the bottom face of the pillow and move it along the Z axis (G+Z) by 1:

Now change back to object mode and move the bed along the Y axis (G+Y) by 0.6:

Next, right click on the viewport and select "Shade Smooth":

Select the wall and also right click and select “Shade Smooth”.
Finally, as you can see, we have a problem in the floor:

In order to fix this, select the wooden floor and move it along the Y axis (G+Y) by 0.05:

Now you have modeled a simple bedroom!
