

Modular Building Tutorial

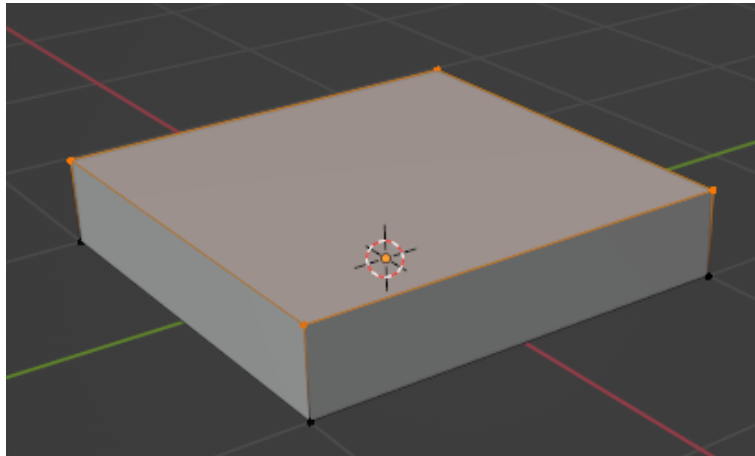

Important concepts covered: array modifier, change 3D cursor, inset individual faces

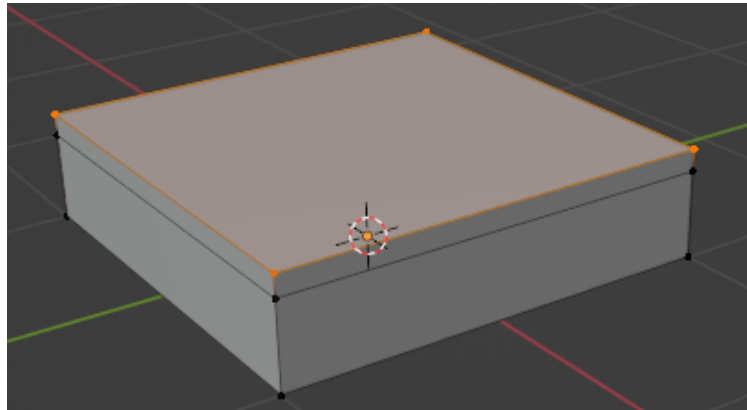

First, delete the default cube (DEL or X) and add a new plane (SHIFT+A → MESH → Plane):

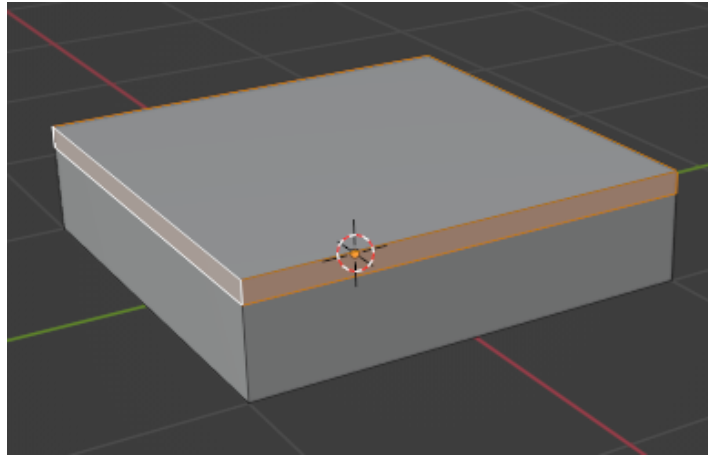

Enter edit mode (TAB) and extrude the plane (E) by 0.4:

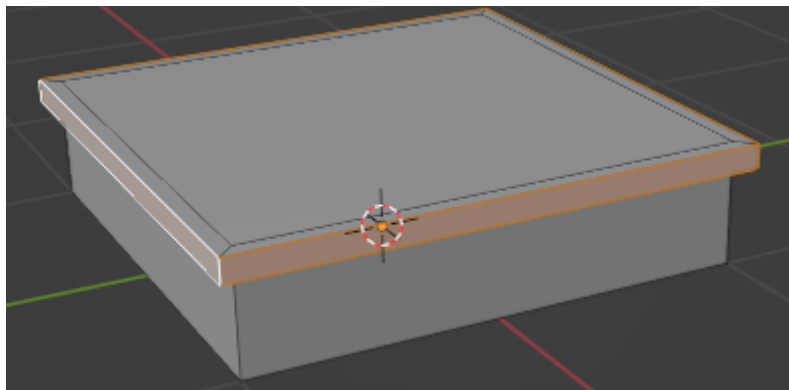

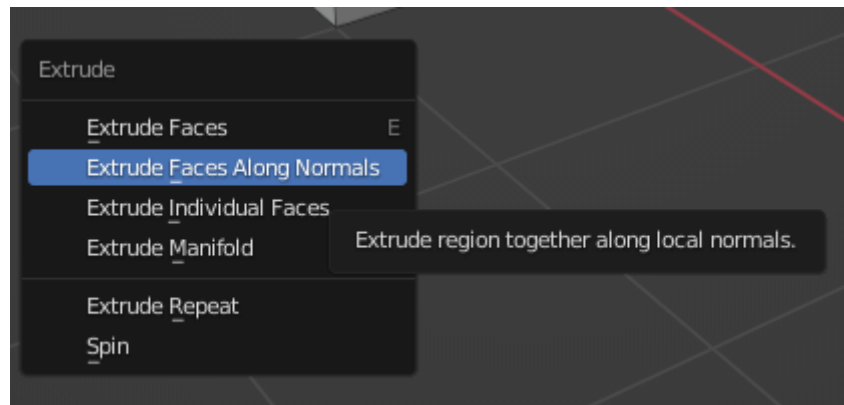

Then extrude (E) again by 0.1:

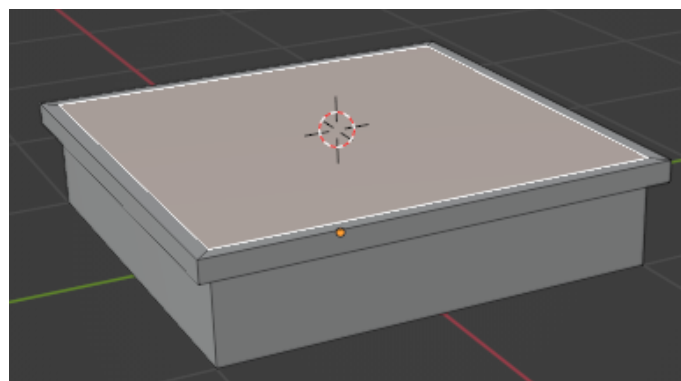

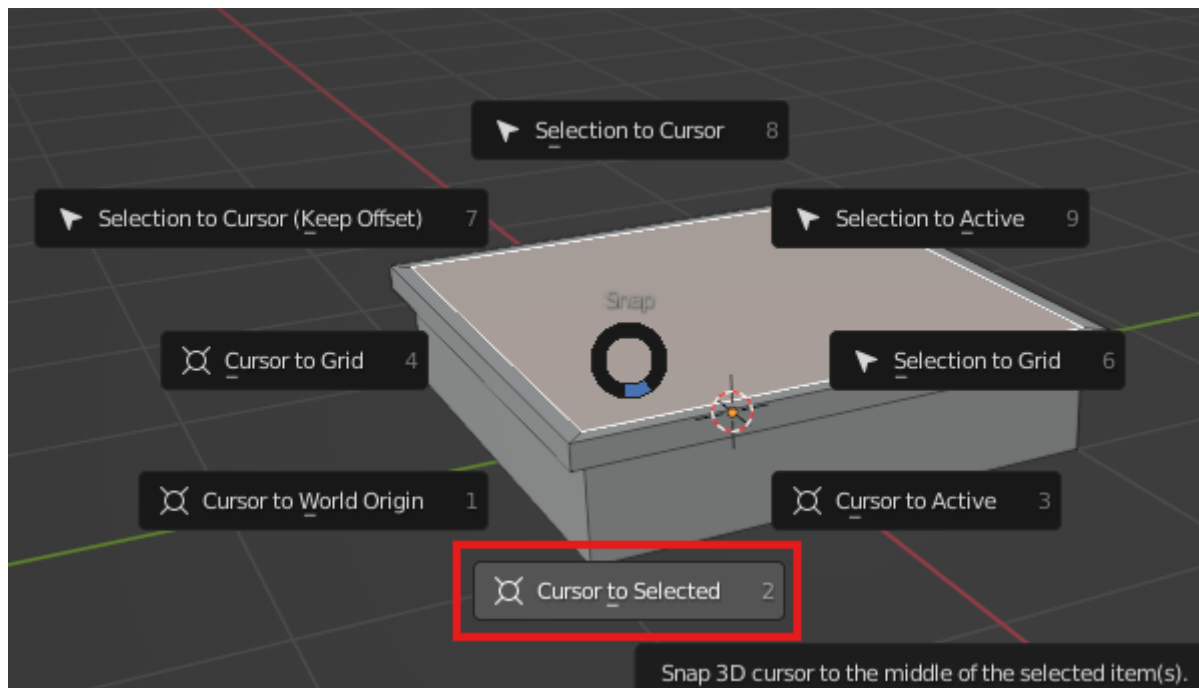

Now change to face selection mode and select the upper face loop like the following (you can do this by holding ALT and the left clicking one of the faces of the loop):

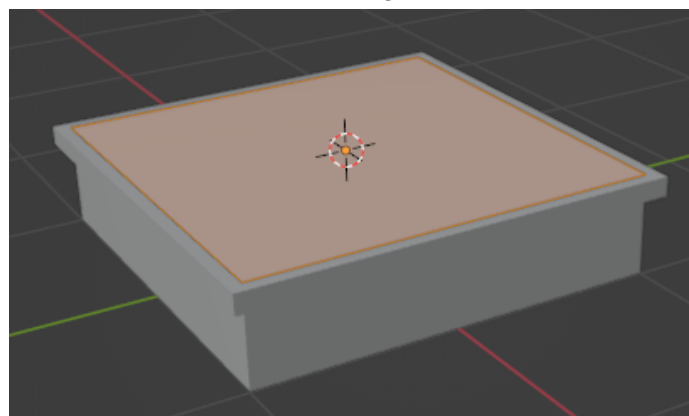

Then, press ALT + E, select “Extrude Faces Along Normals” and type 0.1:

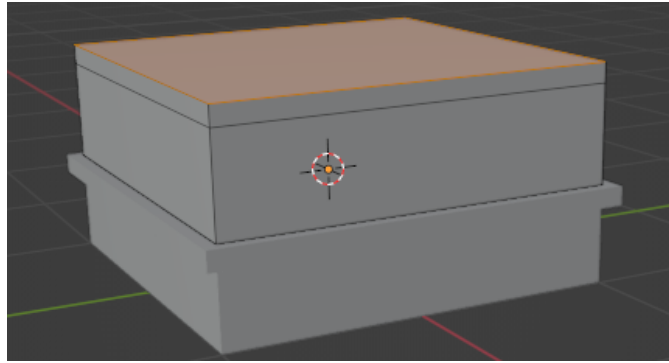

This is going to be the base of the building. Now select the top face of the base and press SHIFT + S and select “Cursor to Selected”. This will move the 3D cursor to the top center of the face:

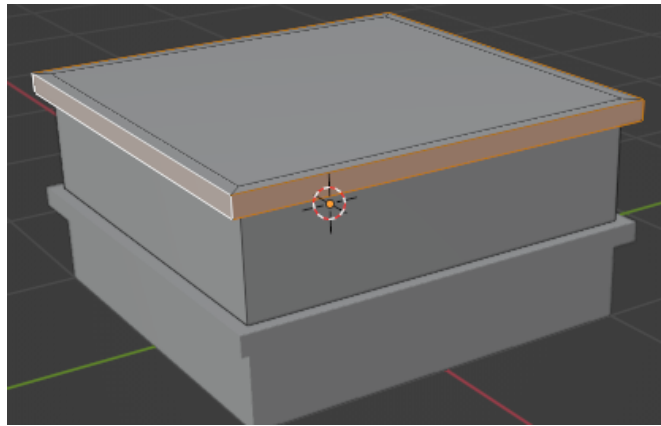

Now change back to object mode, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add a new plane object (SHIFT+A → MESH → Plane) to the scene and enter edit mode (TAB) again:

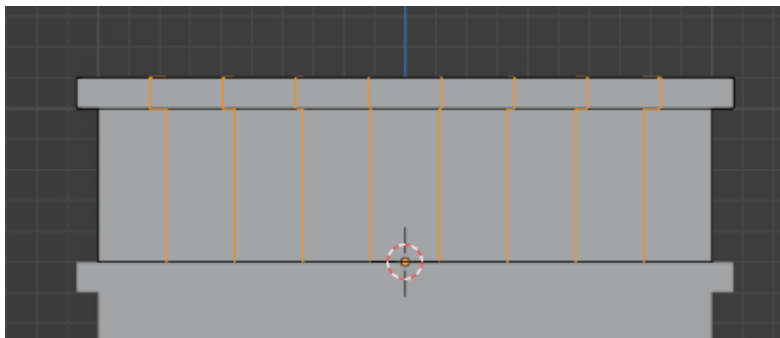

Extrude again (E) by 0.5 and then again (E) by 0.1:

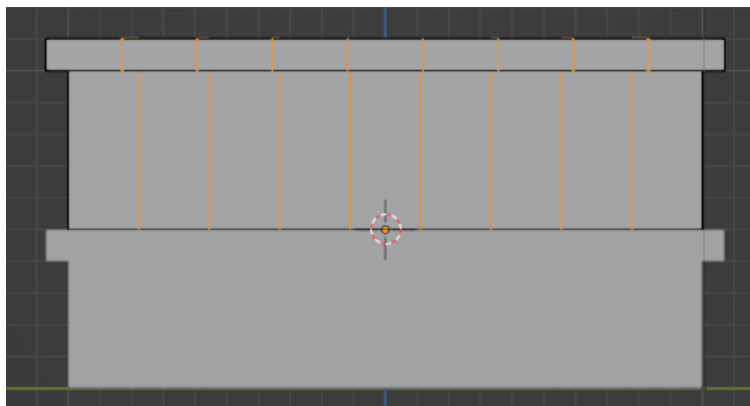

As before, change to face selection mode, select the top face loop, press ALT + E, select “Extrude Faces Along Normals” and type 0.1:

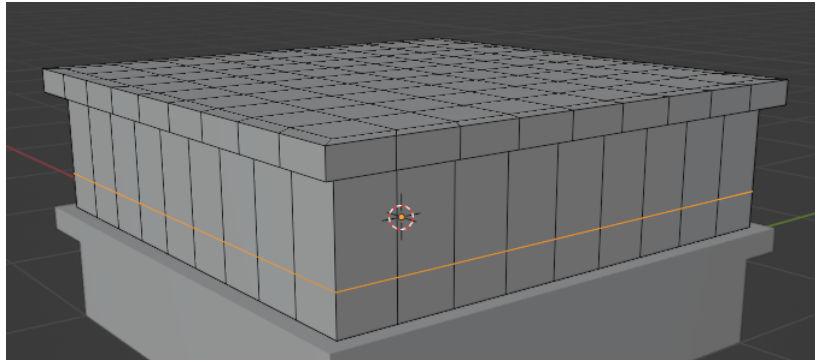

Now go to the front view by pressing NUMPAD 1 and add 8 edge loops (to do this, press CTRL + R, point the mouse to where you want to add the loops and then type “8” or move the scroll of the mouse to increase to 8, then left click twice to confirm):

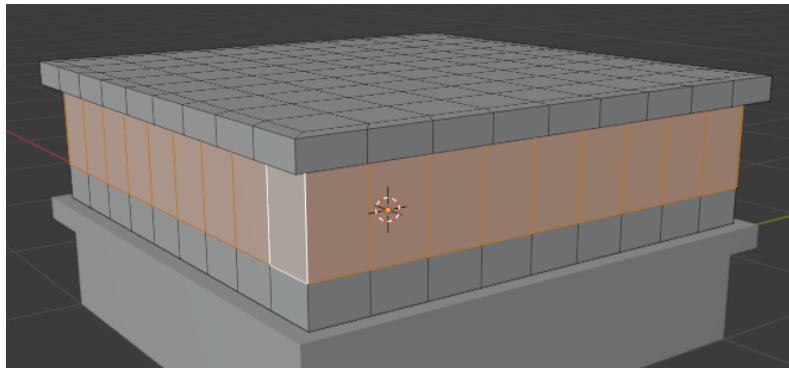

Now go to the right view by pressing NUMPAD 3 and repeat the previous step (add 8 edge loops):

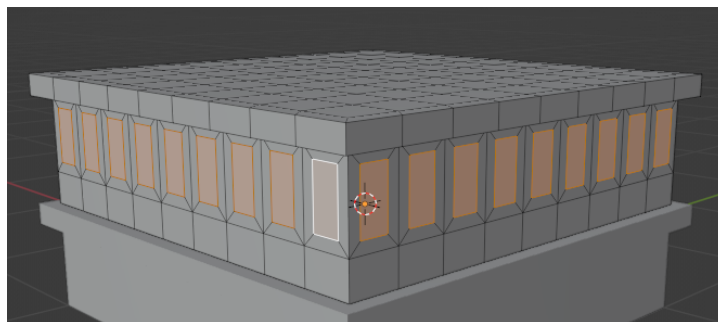

Now, add an horizontal edge loop to the building and move it by 0.4 (to do this, after left clicking the first time to confirm the edge loop, type 0.4 in order to move it):

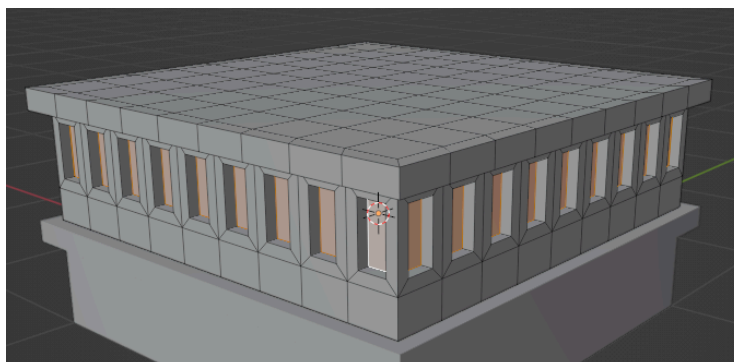

Now, change to face selection mode and select the following face loop:

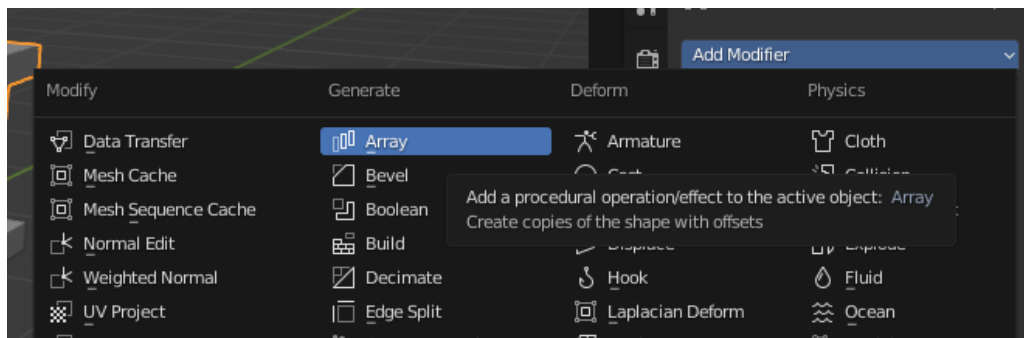

Then, press “I” twice in order to inset the faces individually and type 0.05:

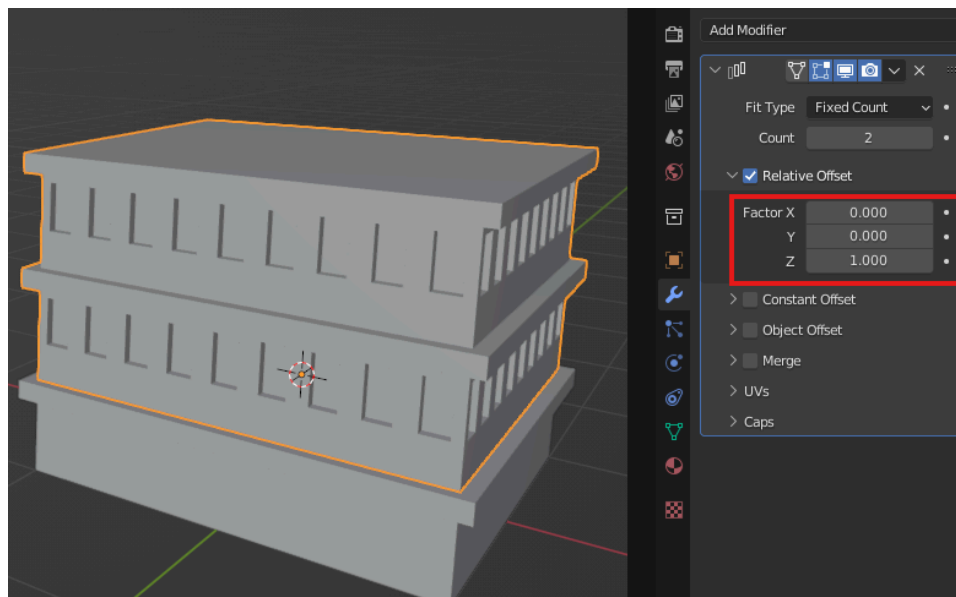

Now, press ALT + E, select “Extrude Faces Along Normals” and type -0.05:

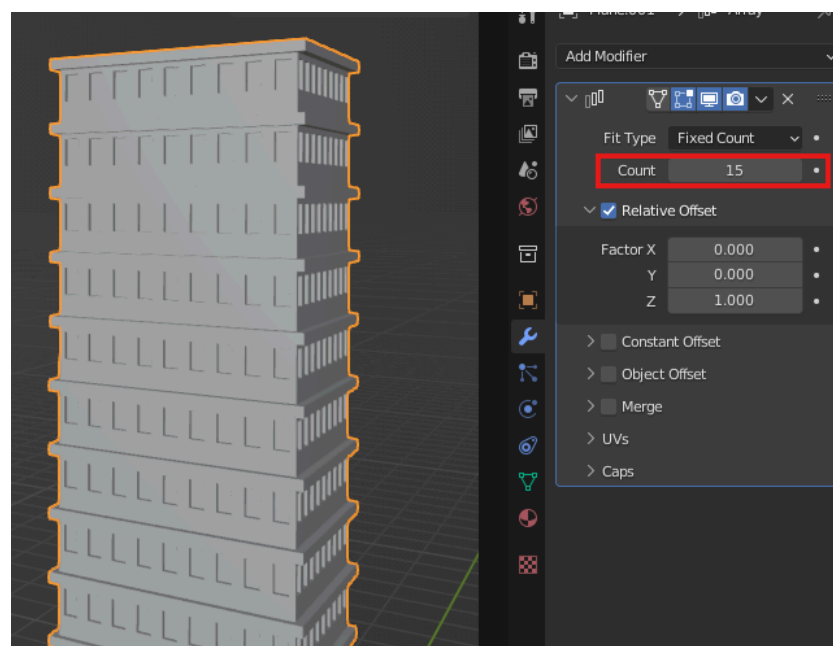

Now go back to object mode and add an Array modifier:

Change the X factor to 0 and the Z factor to 1:

Now, the count will control the number of floors our building will have. Let's make it 15 floors high:

There you go!
