

Perfume bottle tutorial

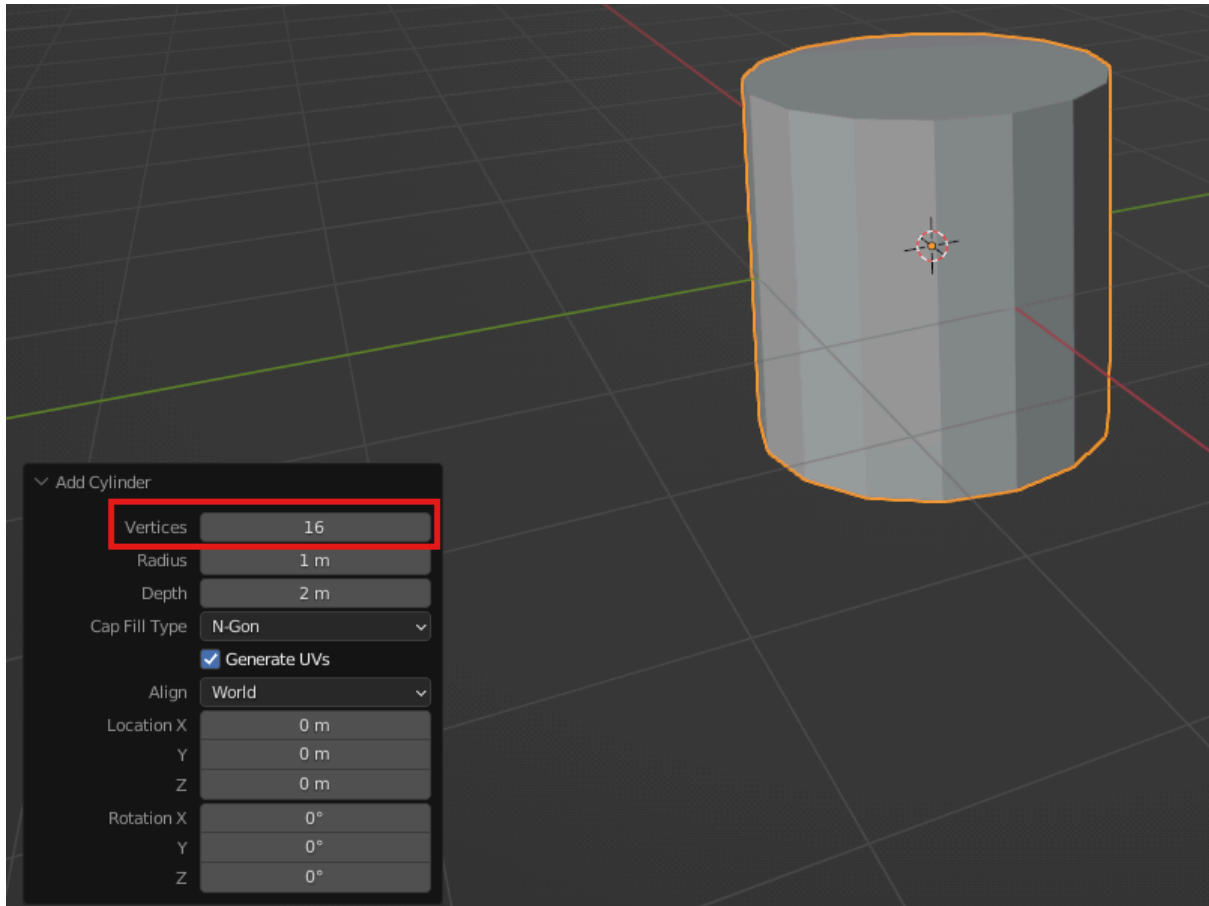

Important concepts covered: bevel, add cylinder

In this tutorial we are going to model the following simple perfume bottle:

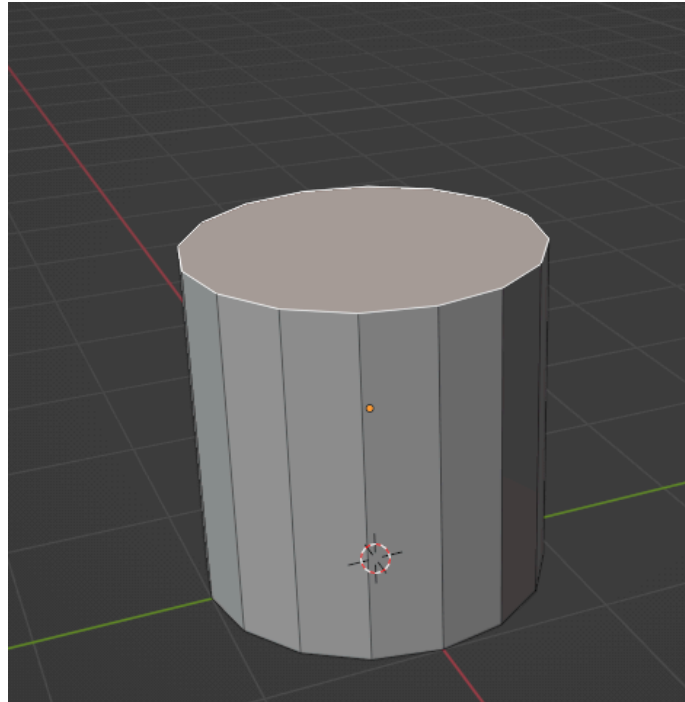

Don't forget to save the blender project before starting the recommender system!

First delete the default cube (DEL or X) and add a cylinder (SHIFT+A → MESH → Cylinder). Under the properties of Add Cylinder operation (on the bottom-left corner of the screen) set the number of Vertices to 16:

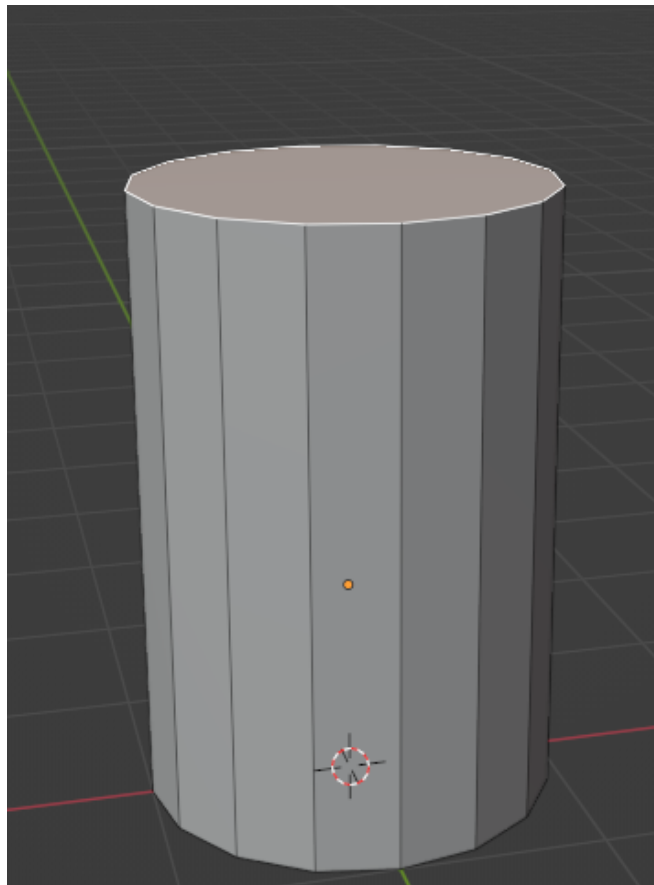

Next, move the cylinder along the Z axis (G+Z) by 1.

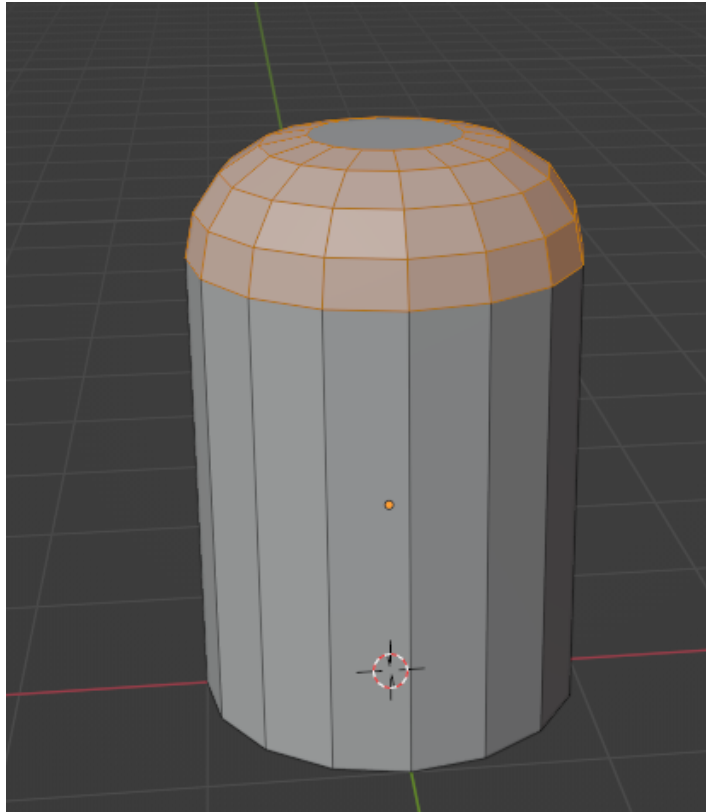

Then, enter edit mode, change to face selection mode and select the top face of the cylinder:

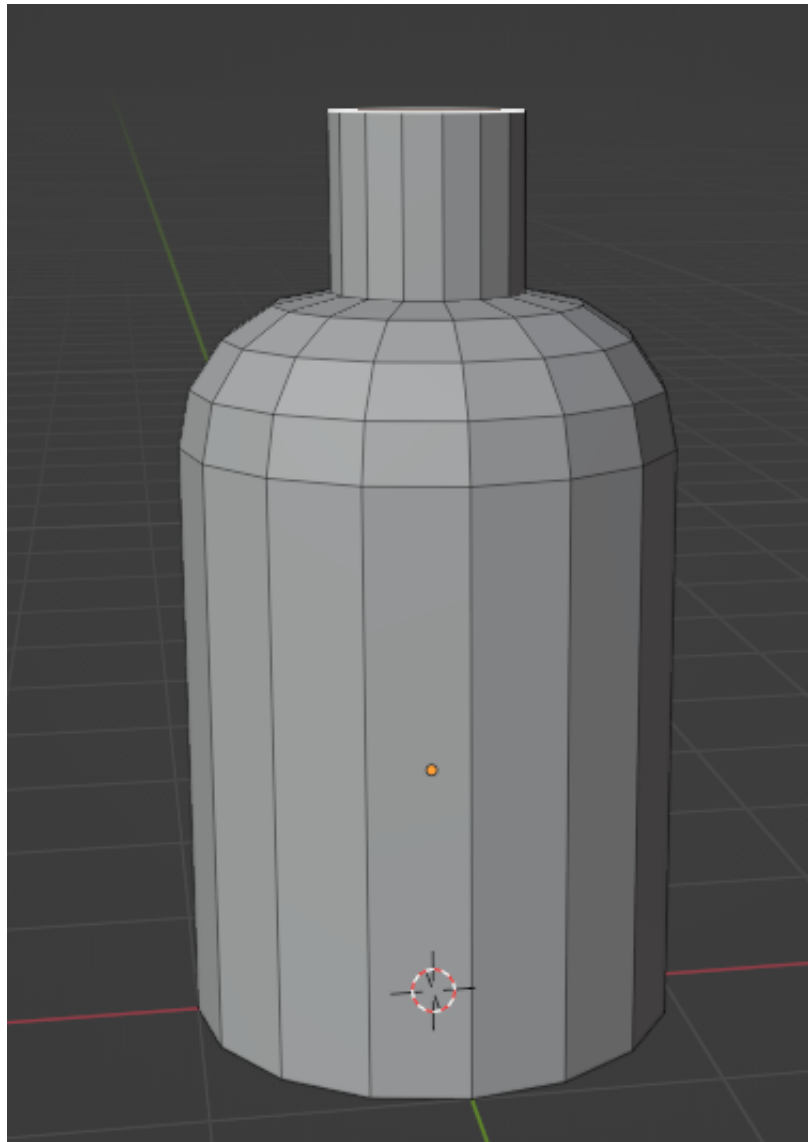

Move it along the Z axis (G+Z) by 1:

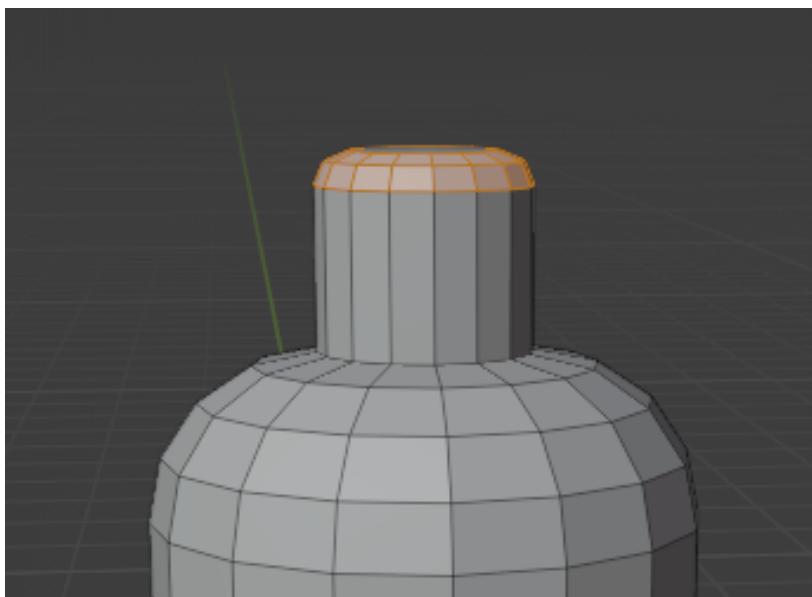

Now add a Bevel (CTRL + B) by 0.6 with 4 segments (you can use the scroll of the mouse to increase the number of segments):

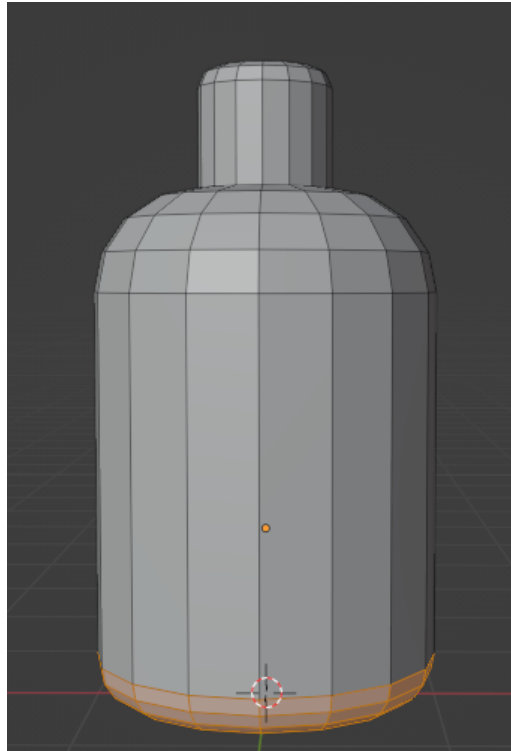

Now select the top face again and extrude (E) by 0.7:

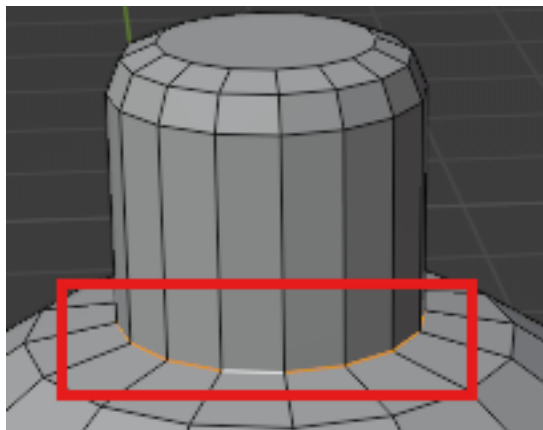

Bevel (CTRL+B) again by 0.12 with 2 segments:

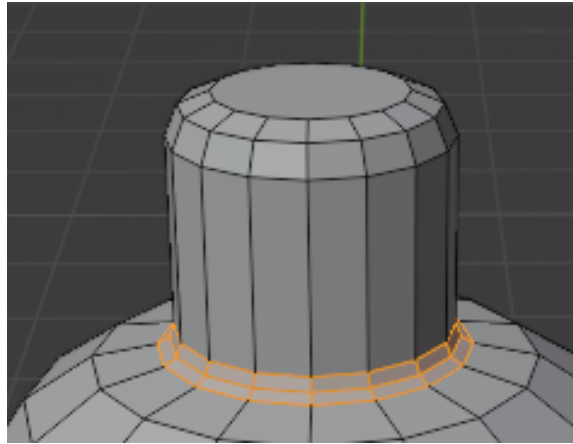

Now select the bottom face of the bottle and also bevel (CTRL+B) it by 0.25 and 4 segments:

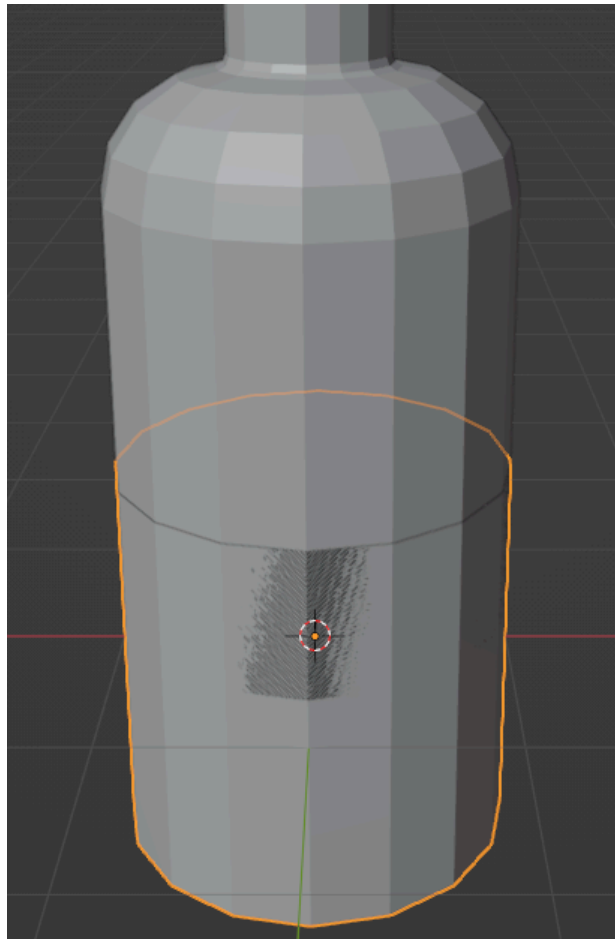

Now change to edge selection mode and select the following edge loop (you can select an edge loop by holding ALT and then clicking with the left mouse button on one of the edges of the loop):

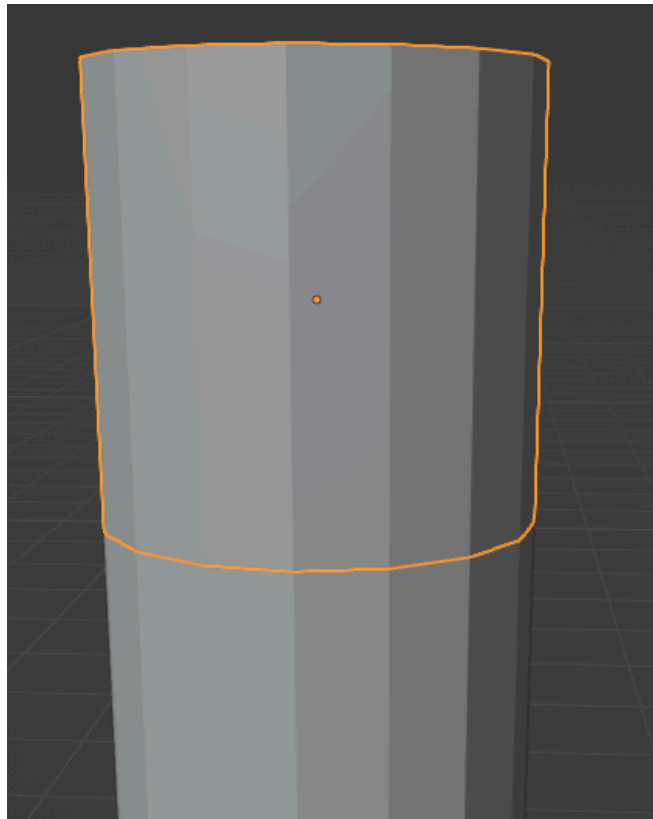

Bevel (CTRL+B) it by 0.05 and 2 segments:

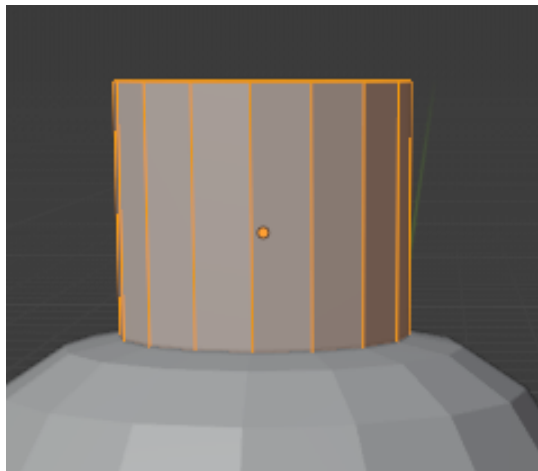

Now go back to Object mode, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add a new cylinder (SHIFT+A → MESH → Cylinder):

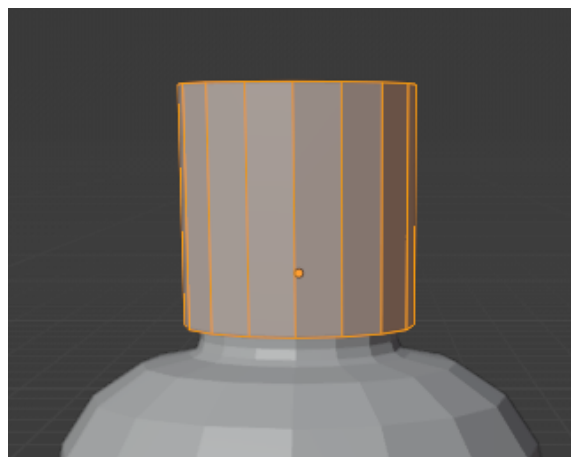

With this new cylinder selected, move it along Z axis (G+Z) by 3.3:

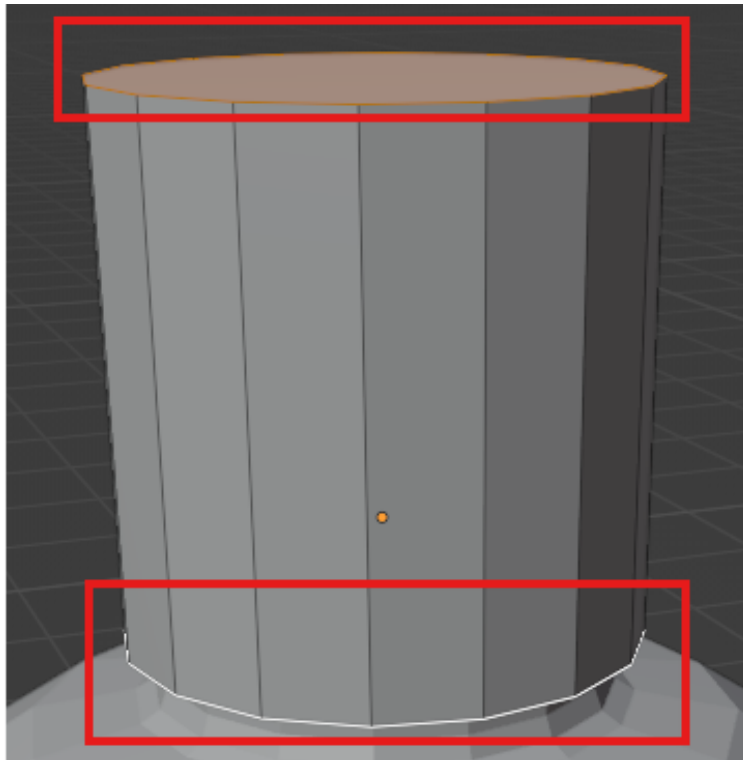

Then enter edit mode and scale it (S) down by 0.45:

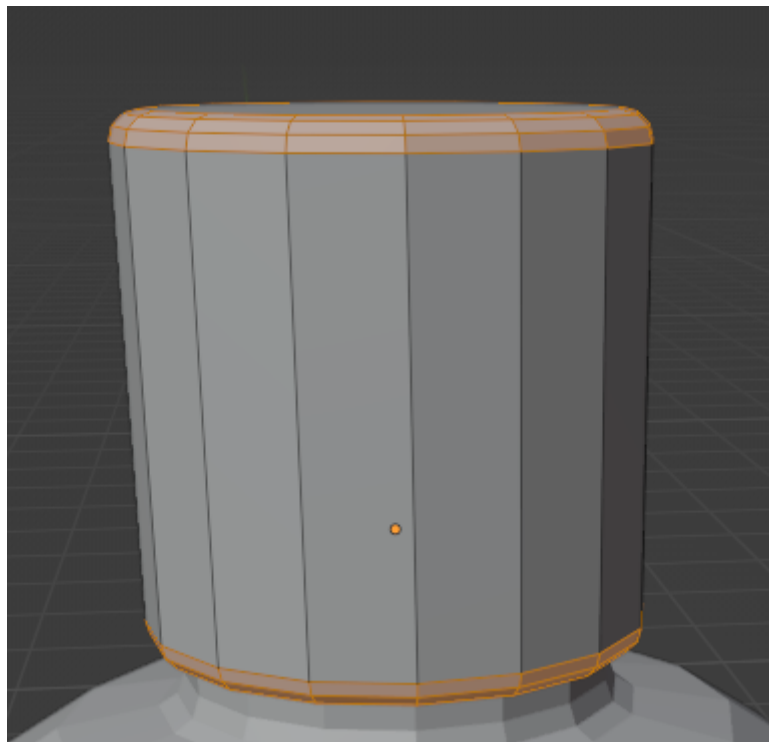

Now, move it along Z axis (G+Z) by 0.25:

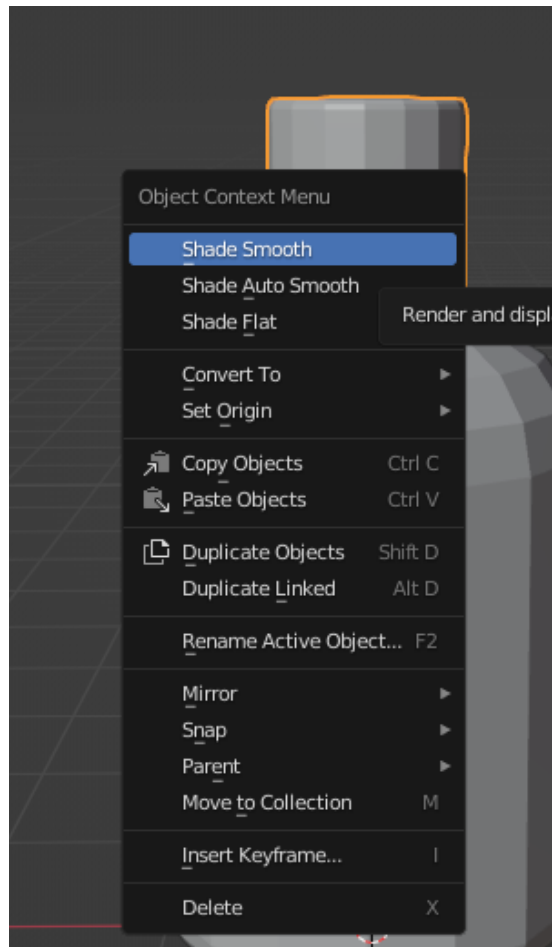

Next, change to face selection mode and select both bottom and upper faces of the cylinder:

Bevel (CTRL+B) it by 0.05 and 3 segments:

Now go back to Object mode and with this cylinder selected, right click in the viewport and select "Shade Smooth":

Next, select the body of the perfume and do the same. You should have the following scene:

Finally, to increase the resolution of the mesh of the perfume body, add a subdivision surface modifier by selecting it under the modifiers menu:
