

Simple Coin Tutorial

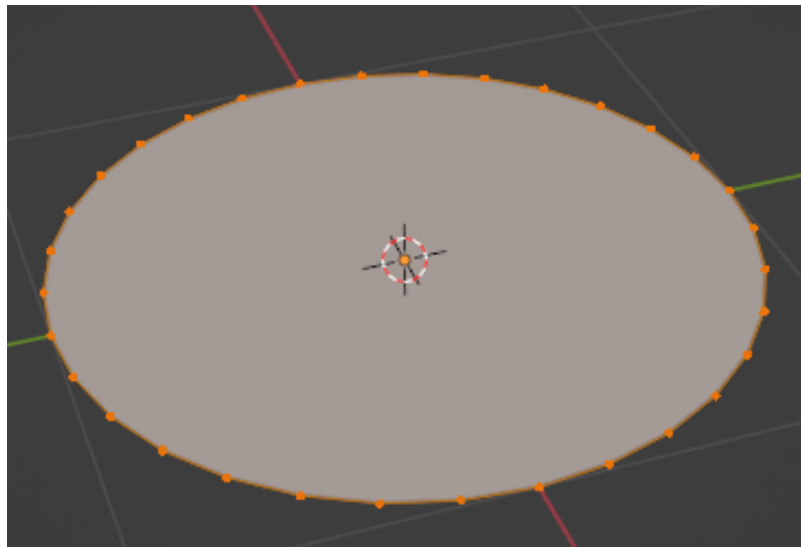

Important concepts covered: fill face, inset individual faces, extrude

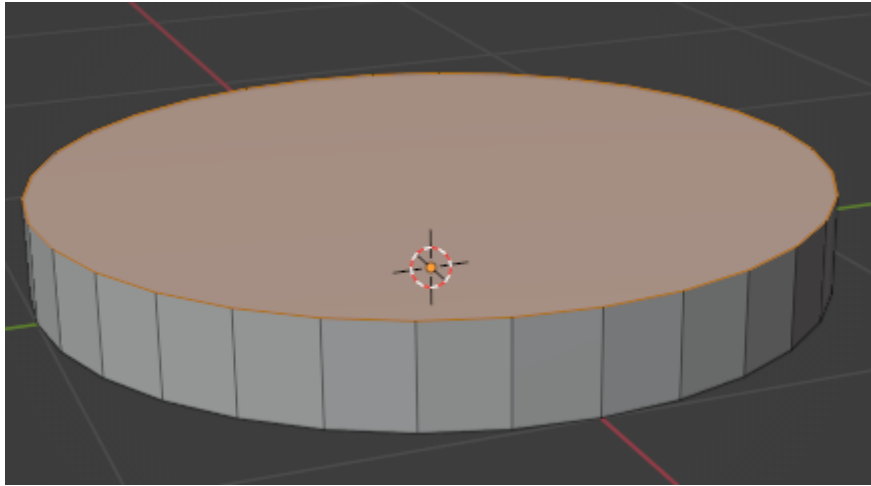

Start by deleting the default cube (DEL or X) and adding a circle (SHIFT+A → MESH → Circle):

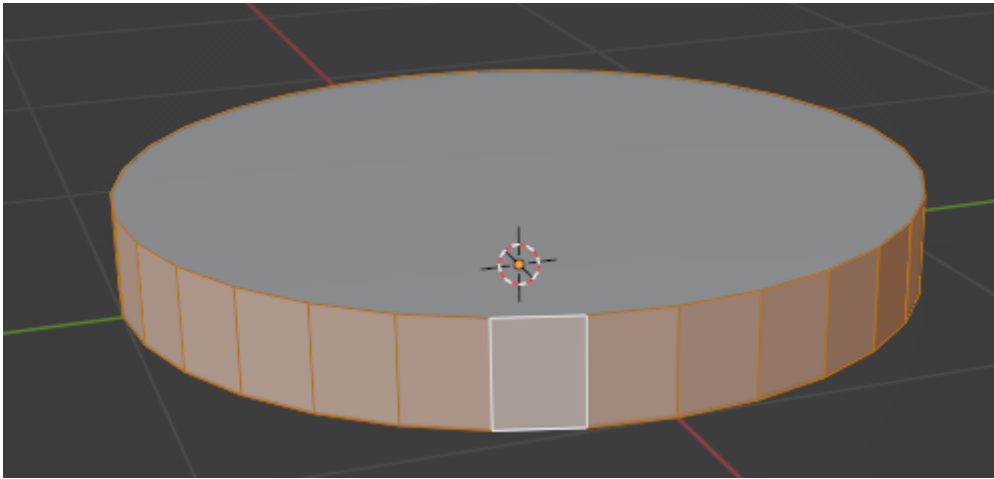

Then, enter edit mode, make sure all the mesh is selected and press “F” to fill it with a face:

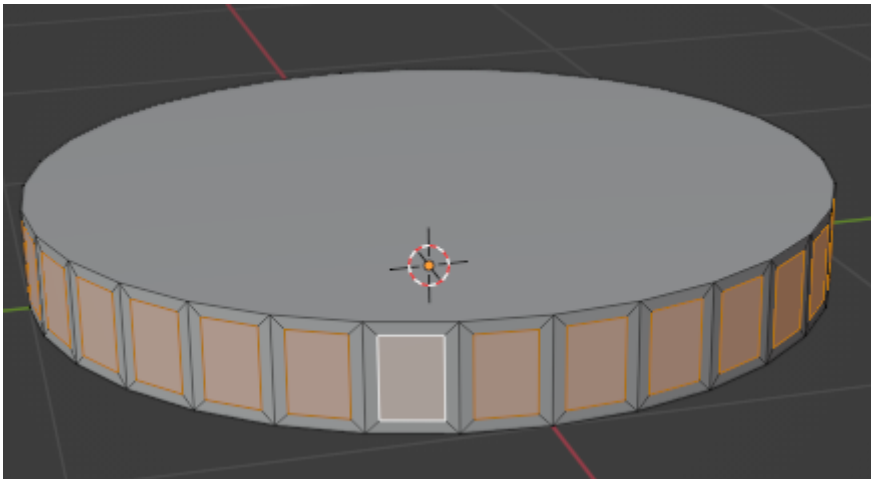

Next, extrude (E) by 0.25 and change to face selection mode:

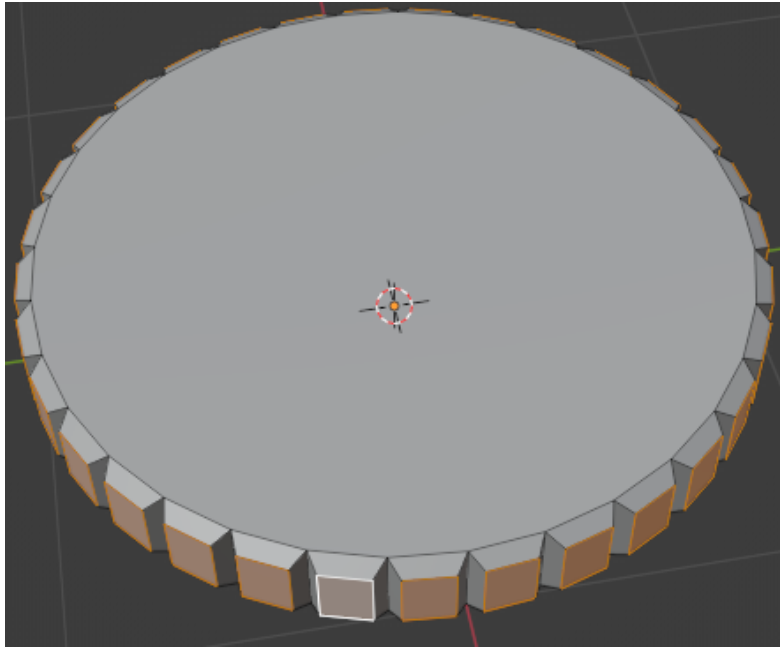

Now select the contour face loop of the coin (you can select loops by holding ALT and then clicking in one of the faces of the loop):

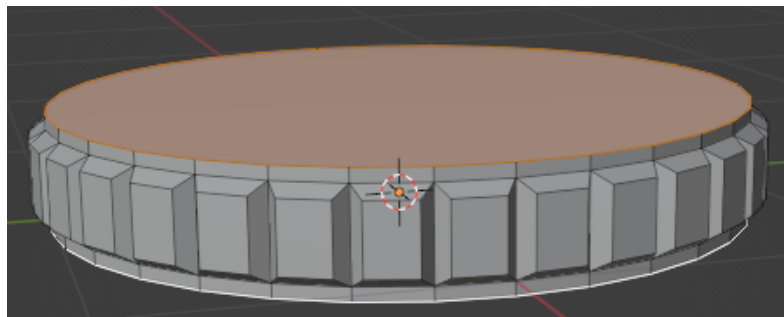

And then press "I" twice (so you inset individual faces) and type 0.03:

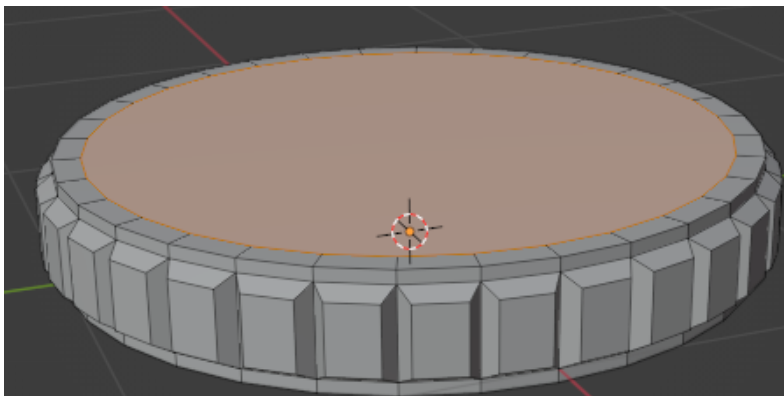

Next, press ALT + S and type 0.05:

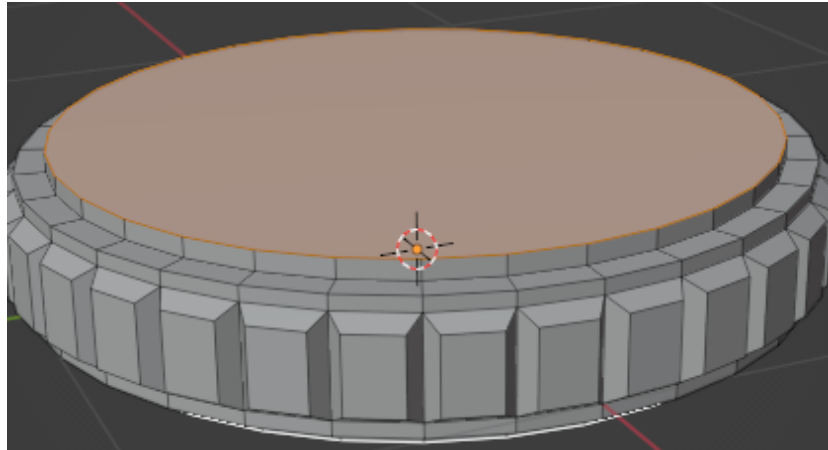

Now, select both the top and bottom circle faces of the coin and extrude (E) and scale it along Z axis (S+Z) by 1.3:

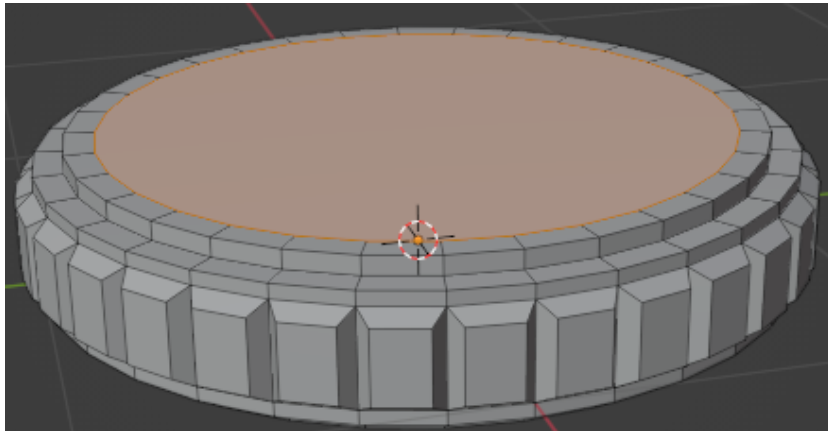

Still with the same selection, press "I" again to inset the faces and type 0.08:

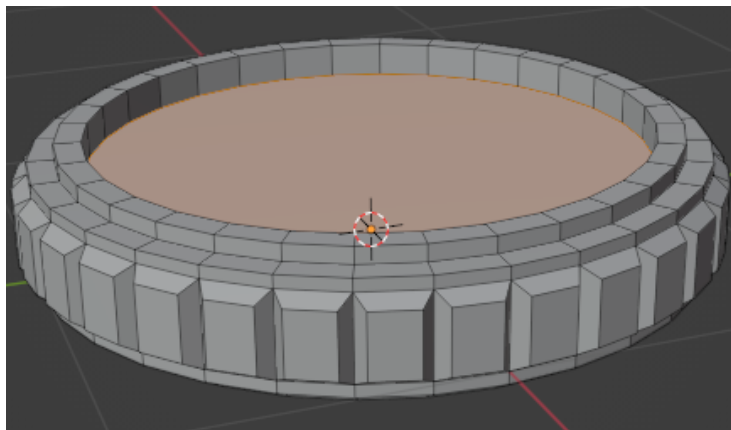

Now extrude (E) again and scale along the Z axis (S+Z) again by 1.3:

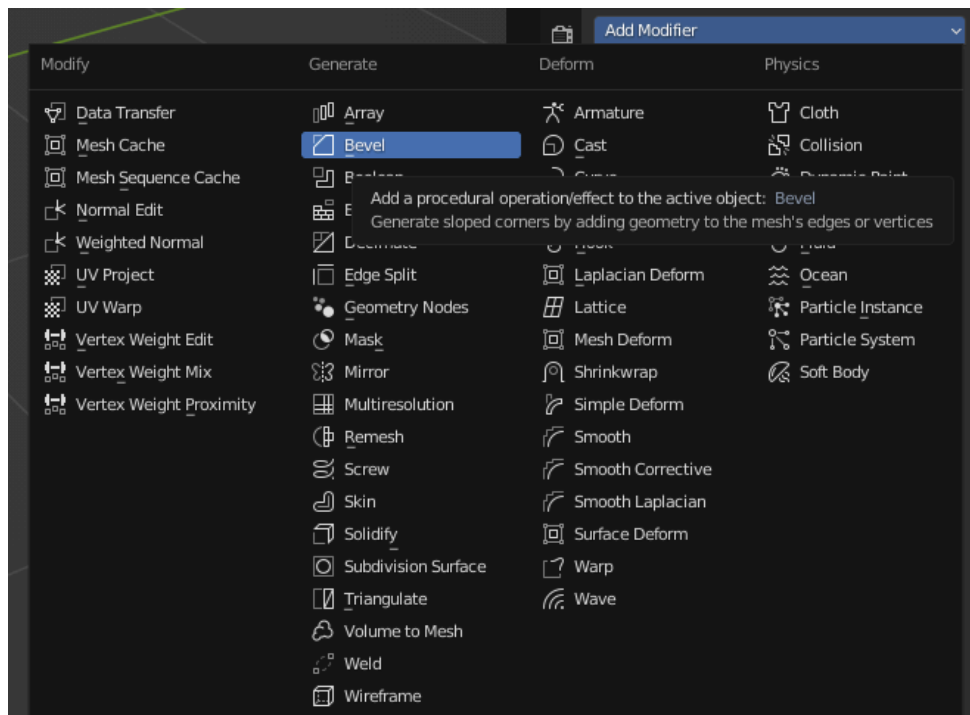

Again, inset (I) by 0.08:

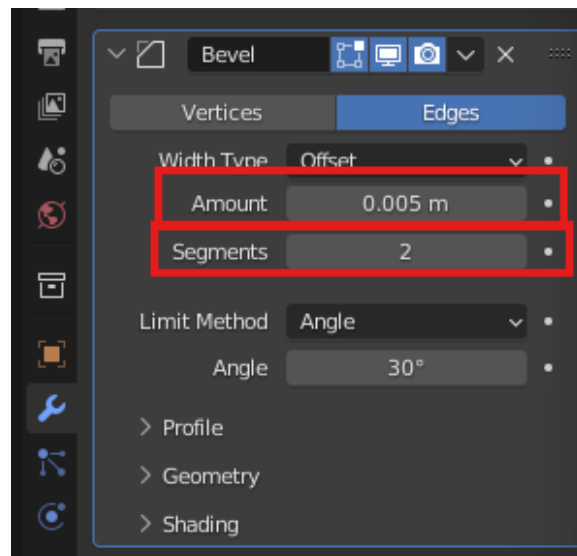

Now, extrude (E) again but now scale it along the Z axis (S+Z) by 0.5:

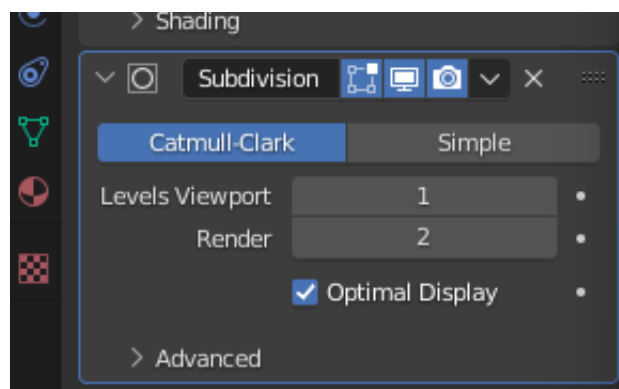

Now go back to object mode and add a Bevel modifier:

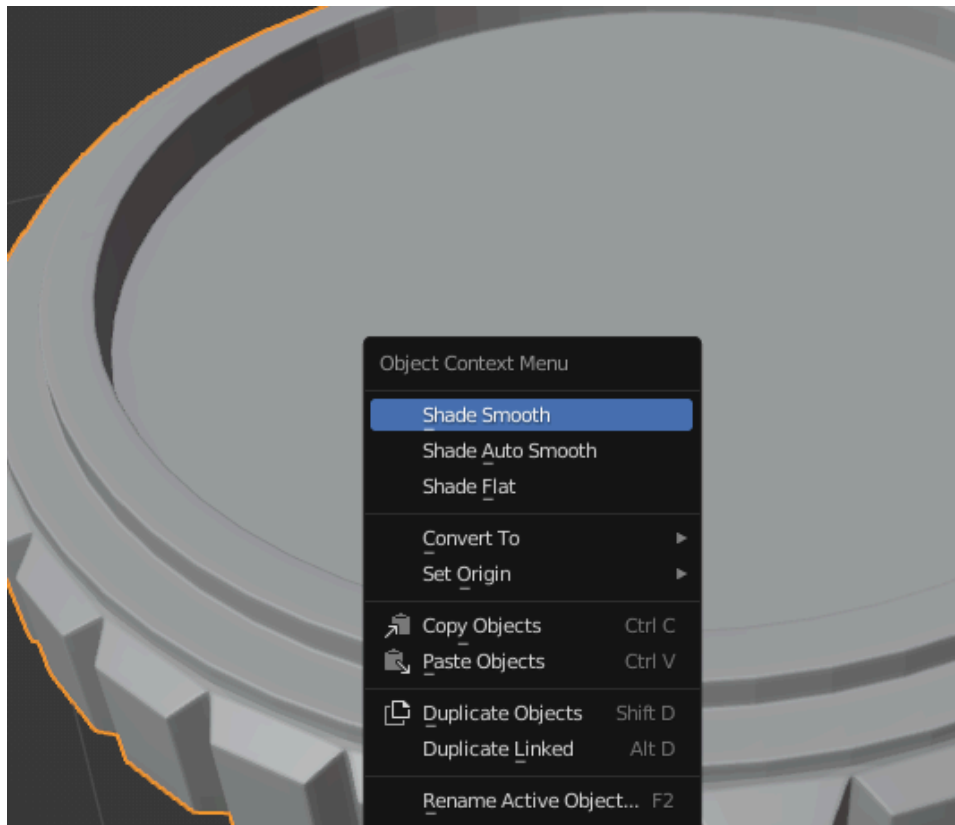

And change the Amount to 0.005 and the segments to 2:

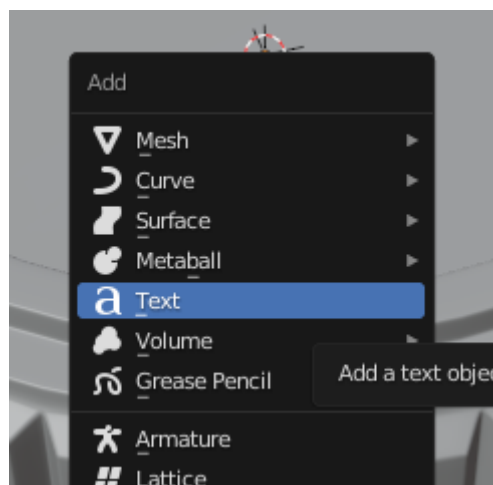

Now add a Subdivision Surface modifier:

Next, with the coin selected, right click on the viewport and select "Shade Smooth":

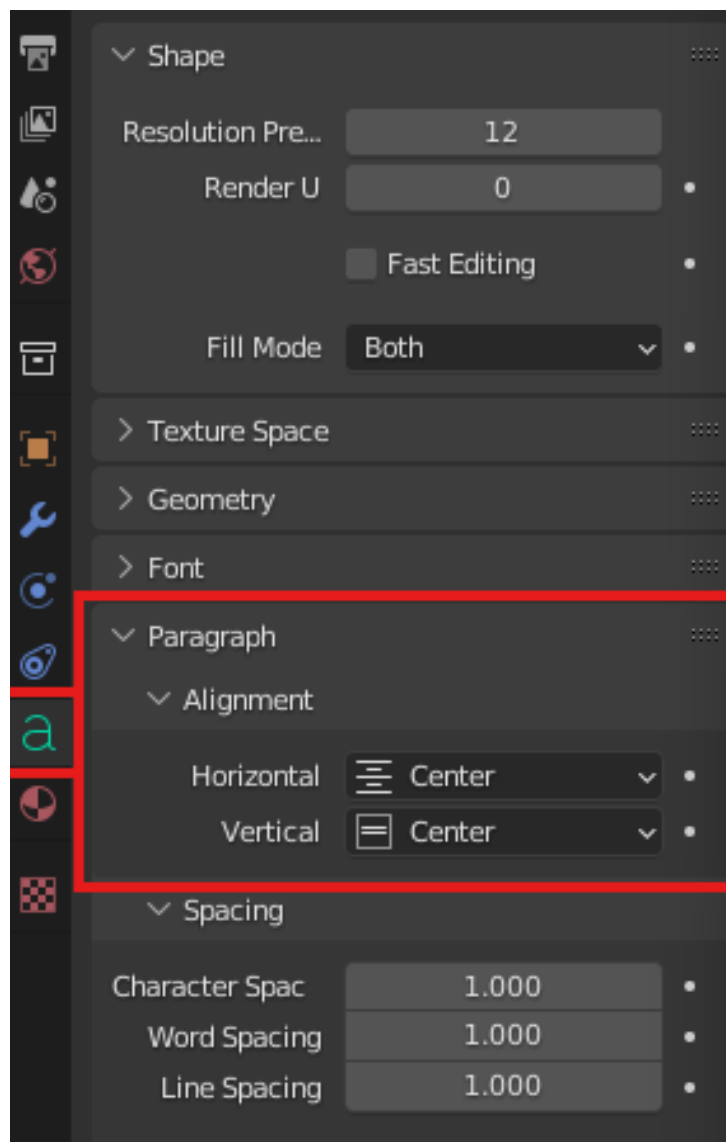

Now, make sure that the 3D cursor is at the center of the scene (you can press SHIFT + C to center it) and add a new text to the scene:

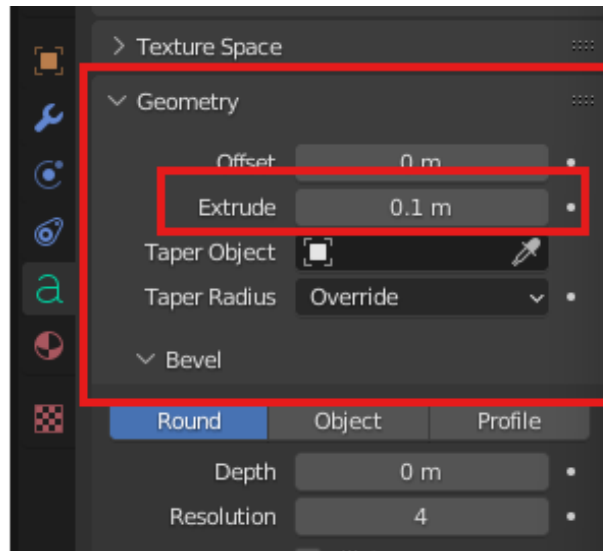

Enter edit mode and delete the default "Text" and type "\$":

Now, under “Object Data Properties” → “Paragraph” → “Alignment” set Horizontal to “Center” and Vertical to “Center”:

Now, under “Geometry” set Extrude to 0.1:

Now move the text along the Z axis (G+Z) by 0.2 and scale it up (S) by 1.5:

There you go! You have now finished modelling a simple coin!
