

Wine Glass Tutorial

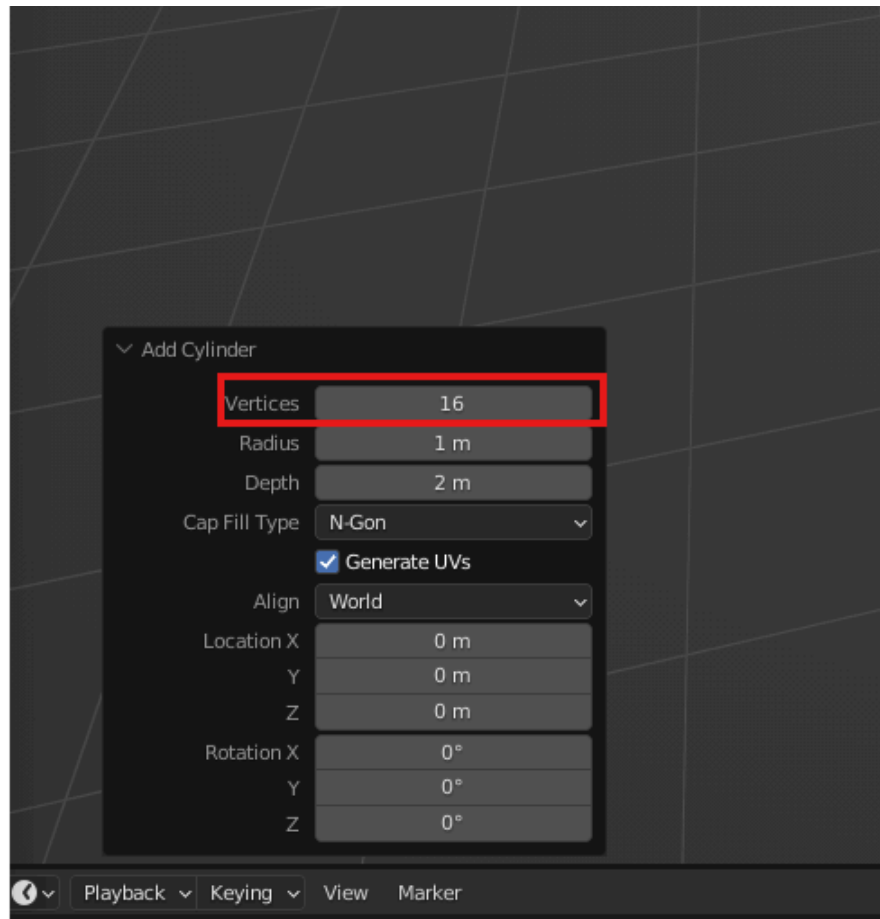

Important concepts covered: add edge loops, scale, extrude

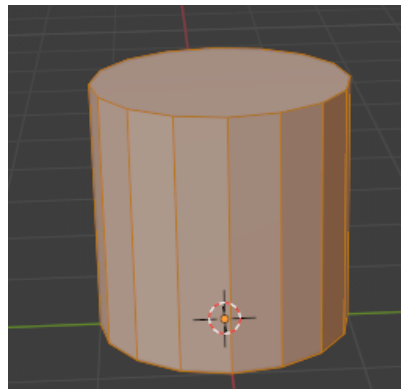

Let's start by deleting the default cube (DEL or X) and adding a new cylinder to the scene (SHIFT+A → MESH → Cylinder):

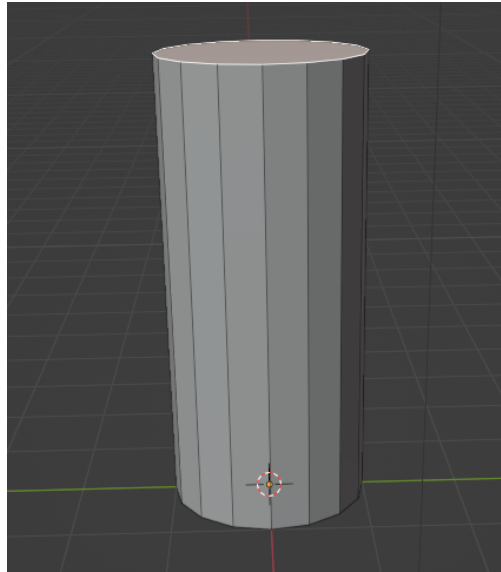

Next, change the number of vertices to 16. You can do this by clicking on the little window that has appeared on the bottom left corner of the screen:

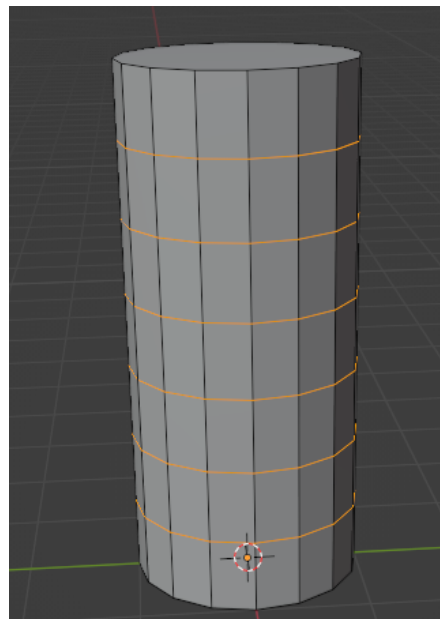

Now enter edit mode and move the cylinder up (G+Z) by 1:

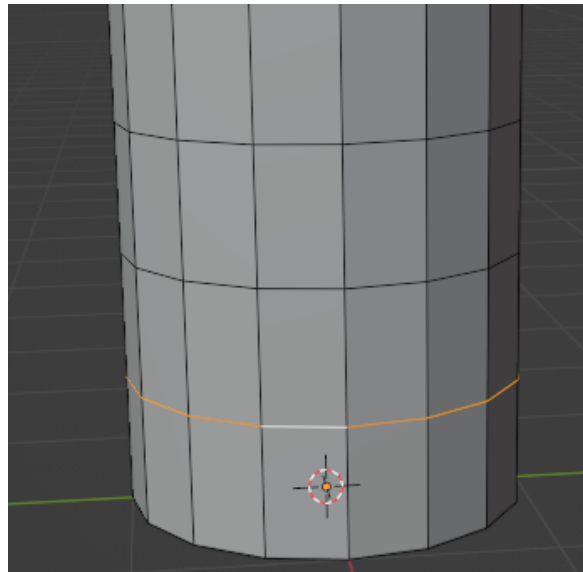

Change to face selection mode, select the top face of the cylinder and move it along the Z axis (G+Z) by 2.5:

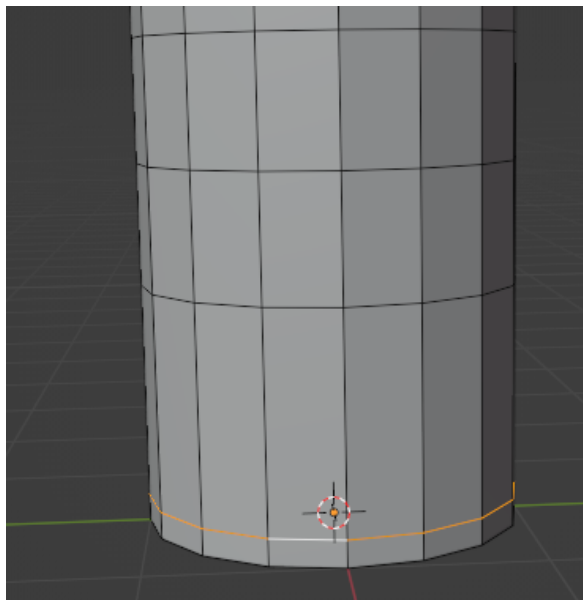

Now add a loop cut using 6 cuts (to do this, you can press CTRL + R and type '6' or scroll the middle mouse button to increase the number of cuts until it has 6 cuts, then to confirm double click the left mouse button):

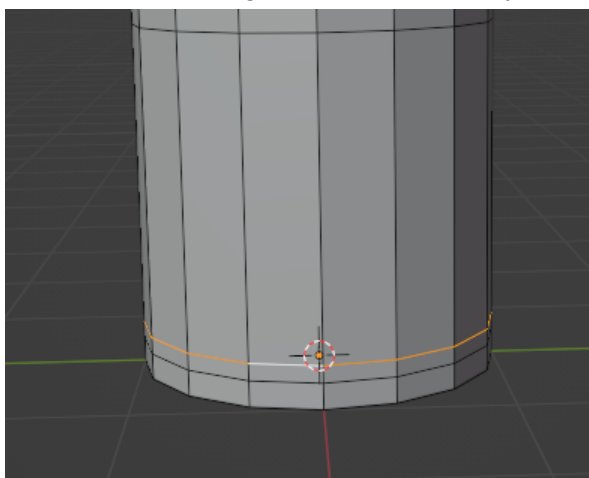

Now let's start from the bottom. Select the first created edge loop (you can hold ALT and left click on one of the edges to select a loop):

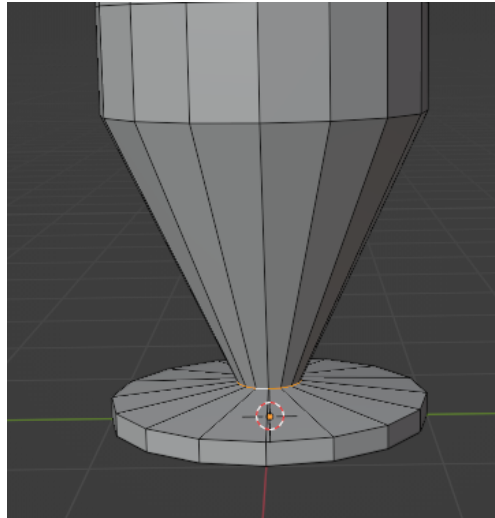

Move it along the Z axis (G+Z) by -0.5:

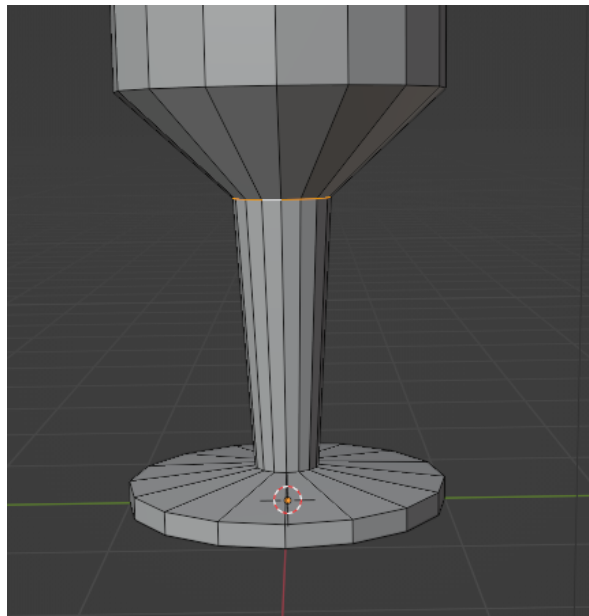

Now select the next loop and move it along the Z axis (G+Z) by -1.05:

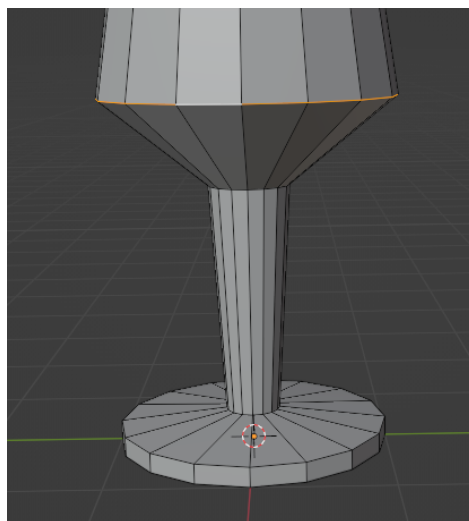

And then scale it down (S) by 0.2:

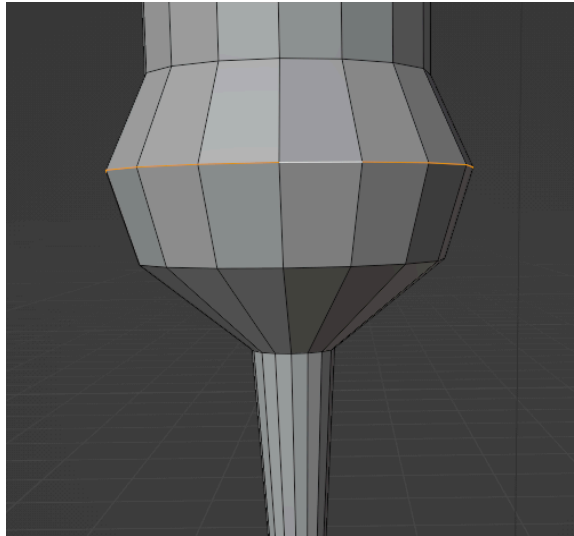

Now select the next edge loop and scale it down (S) by 0.3:

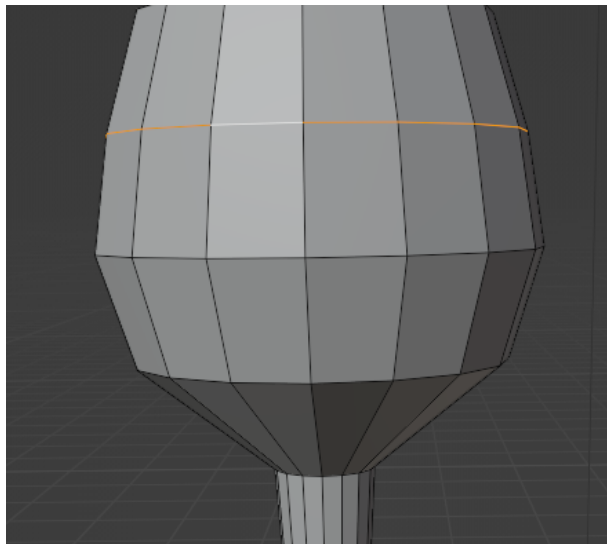

Then, select the next edge loop and scale it up (S) by 1.1:

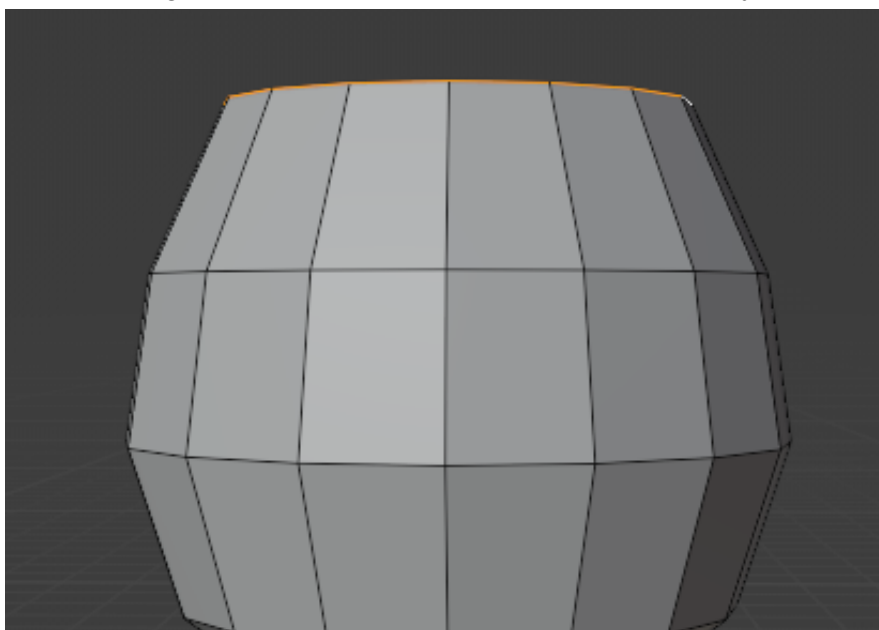

Again, select the next edge loop and scale it up (S) by 1.3:

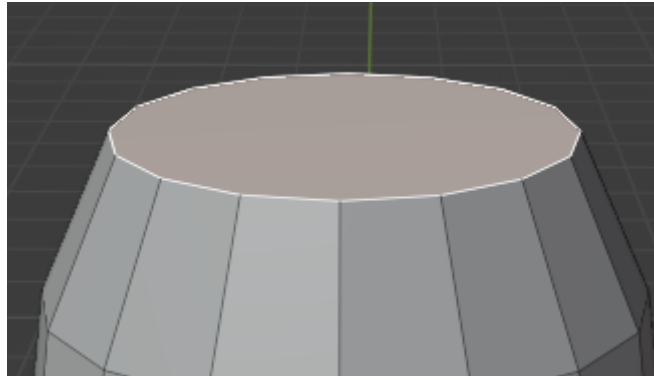

Now select the next edge loop and scale it up (S) by 1.2:

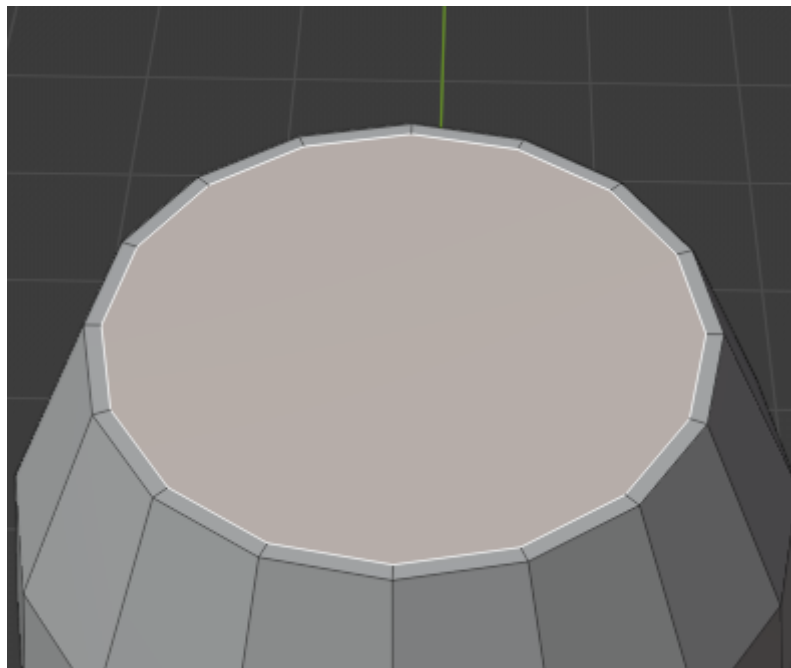

Finally, select the last edge loop (the top one) and scale it down (S) by 0.9:

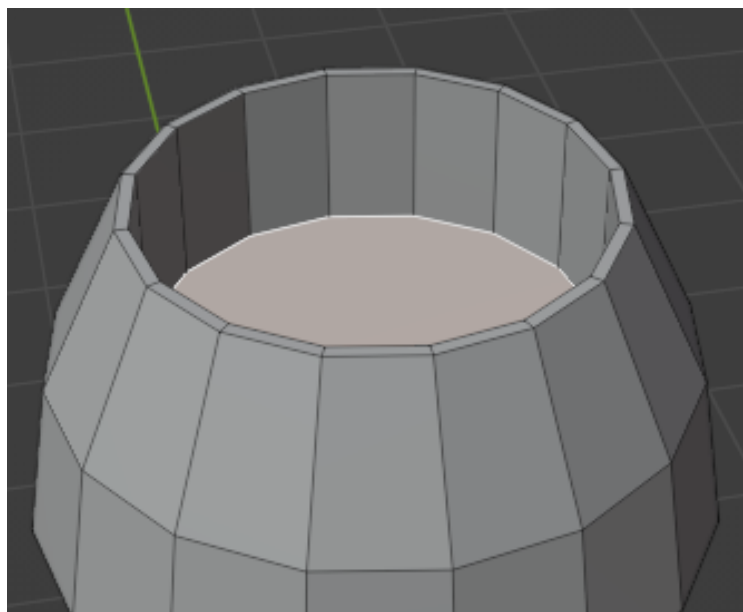

Now the outside is modelled, but we have to model the inside of the glass. So to start, change to face selection mode and select the top face of the wine glass:

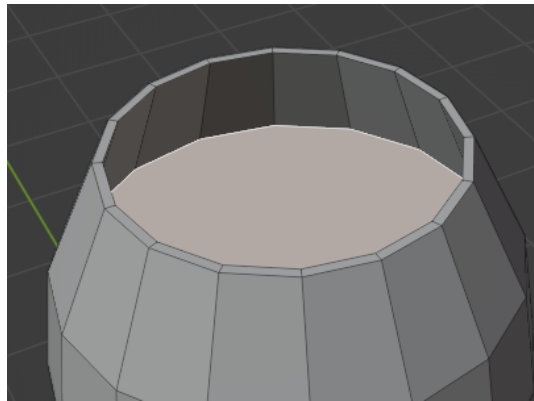

Now, inset the face by pressing “I” and typing 0.05:

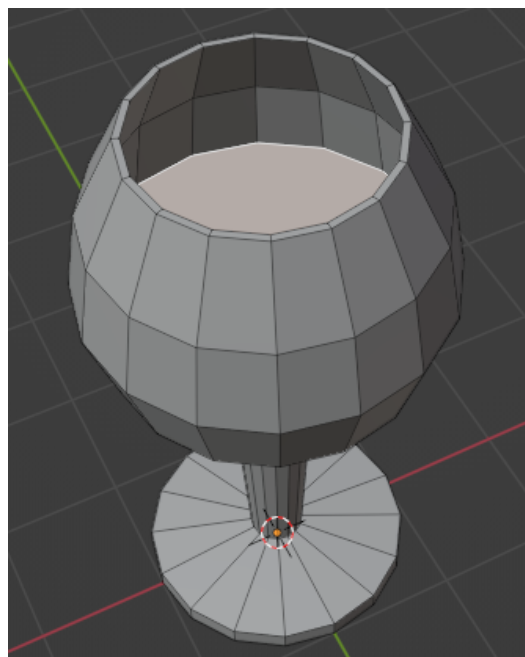

Next, extrude (E) and move it along the Z axis (G+Z) by -0.64:

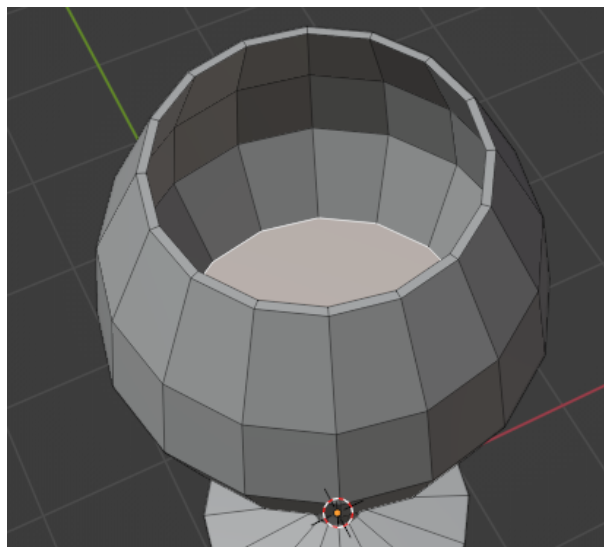

scale it up (S) by 1.3:

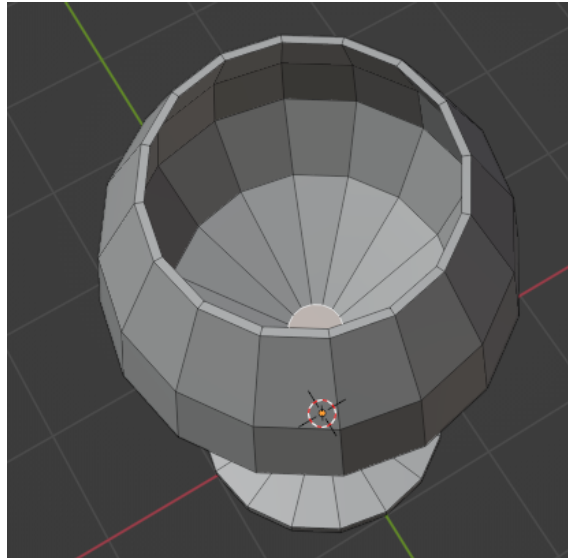

Now extrude it again (E) and move along the Z axis (G+Z) by -0.64 again and scale it up (S) by 1.1:

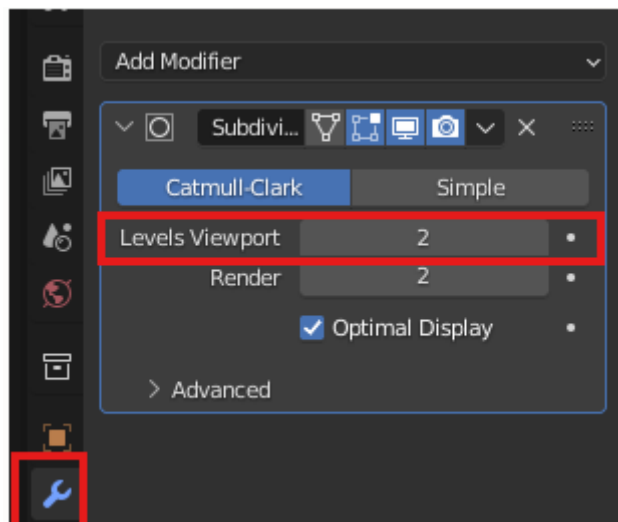

Again, extrude the face (E) and move it along the Z axis (G+Z) by -0.64 and then scale it down (S) by 0.8:

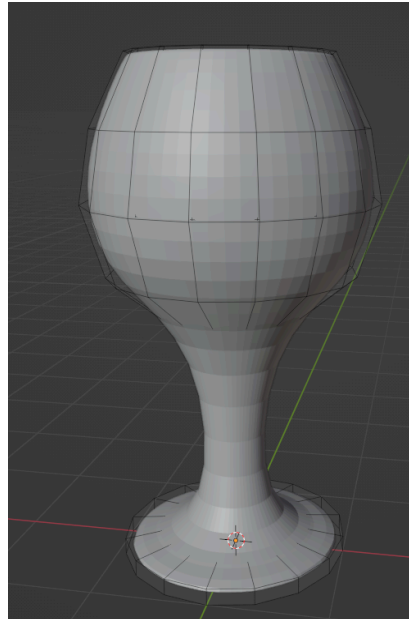

Finally, extrude the face (E) and move it along the Z axis (G+Z) by -0.5 and then scale it down (S) by 0.2:

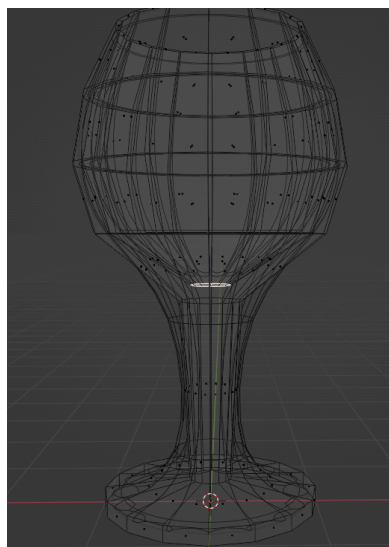

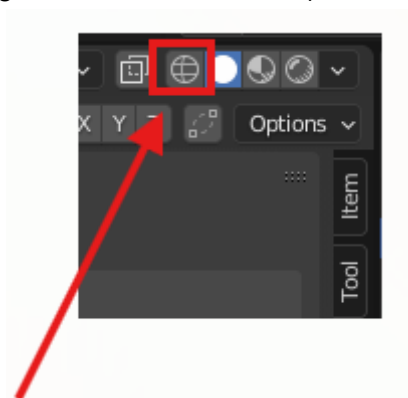

Now go to the modifiers tab and add a Subdivision Surface modifier and change the “Levels Viewport” to 2:

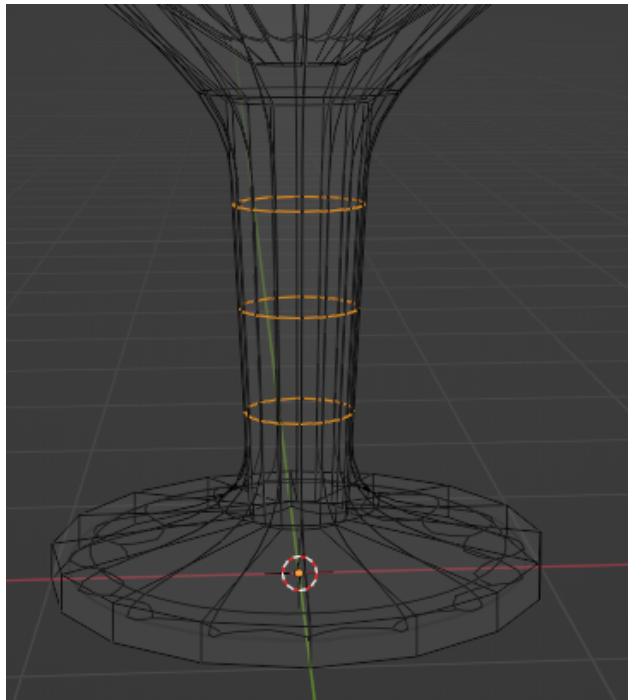

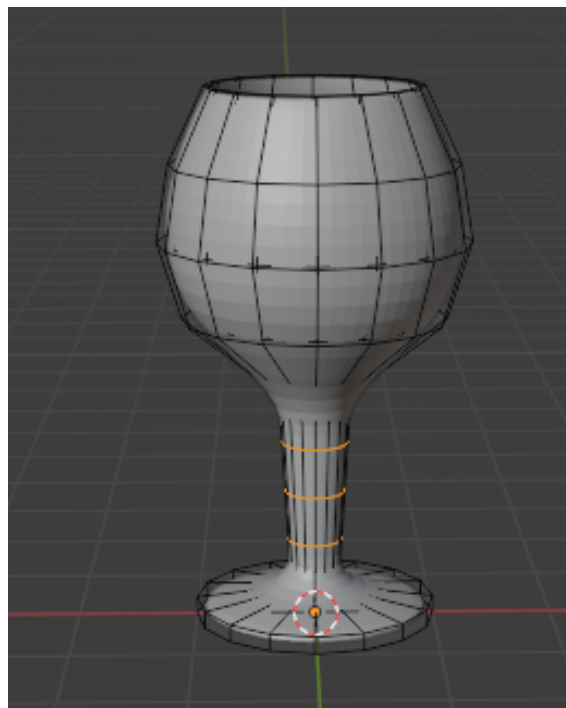

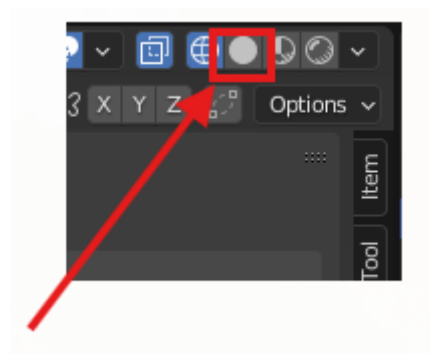

As you can see, the support of the wine glass looks too thick, and that's because there are no loops in the middle of the glass. In order to fix it, let's first change to wireframe mode (you can click the icon on the top right corner of the screen):

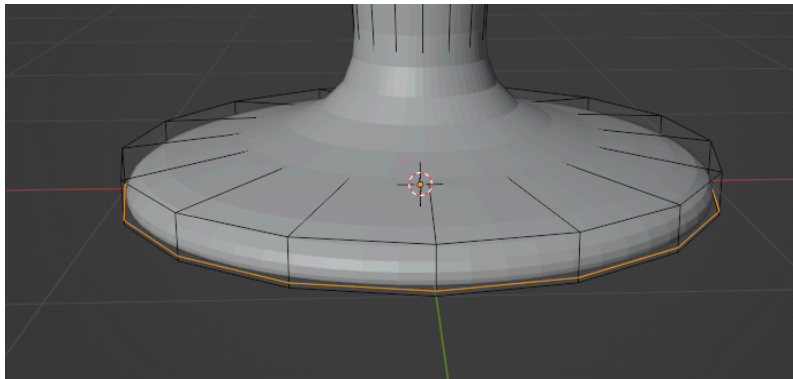

Now let's add 3 edge loops (CTRL+R, 3) in the support:

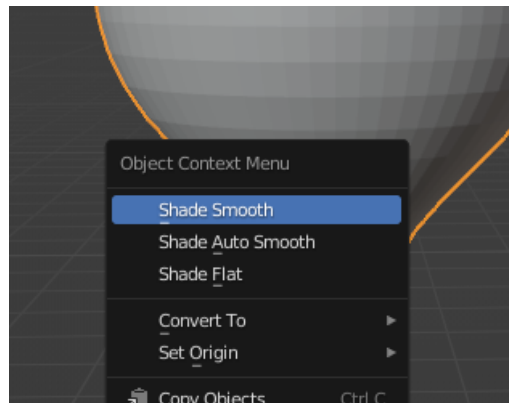

Now change back to solid view:

Now add an edge loop (CTRL+R) on the base of the wine glass and move it by 0.8:

Now go back to object mode and right click the viewport with the wine glass selected and click on “Shade Smooth”:

There you go! Now you have a wine glass!:
